COURSE CONTENTS

Semester I

**F. Y. B.Tech. (CIVIL /MECHANICAL/ELECTRICAL)
ENGINEERING**

Academic Year: 2019-2020

List of Courses

BS-BT101 Engg. Mathematics-I	3
ES-BT102 Basic Electrical Engineering	5
ES-BT103 Engineering Graphics-I	7
ES-BT104 Engineering Mechanics-I	9
BS-BT105 Applied Physics-I	11
BS-BT106 Applied Chemistry-I	13
ES-BT152 Basic Electrical Engineering (Lab.)	15
ES-BT153 Engineering Graphics-I (Lab)	16
ES-BT154 Engg. Mechanics-I (Lab.)	17
BS-BT155 Applied Physics-I (Lab.)	18
BS-BT156 Applied Chemistry-I (Lab.)	19
ES-BT199 Workshop Practice-I	20
BS-BT201 Engg. Mathematics-II	23
ES-BT202 Basic Electronics Engineering	25
ES-BT204 Engineering Mechanics-II	27
BS-BT205 Applied Physics-II	29
BS-BT206 Applied Chemistry-II	31
ES-BT207 Computer Programming	33
HSM-BT208 Communication Skills	35
BS-BT255 Applied Physics-II (Lab.)	37
BS-BT256 Applied Chem.-II (Lab.)	38
ES-BT257 Computer Programming (Lab.)	39
ES-BT299 Workshop Practice-II	40
VA-BT229 Hands on Electronics	42
MC-BT001 Constitution of India	43

Prerequisites: Nil

Course Objectives:

The main objectives of the course are

1. To Introduce Differential Calculus.
2. To Introduce Partial Differentiations and its applications to find Maxima and Minima, Jacobian.
3. To Introduce Complex Numbers and its applications to find roots of equations.
4. To Introduce Vector Calculus.

Course Outcomes:

At the end of the course the students shall be able to

1. Find n^{th} order derivative and expansions of functions.
2. Find partial derivatives of functions of more than one variable.
3. Find roots of algebraic equations and logarithm of complex numbers.
4. Find angle between two surfaces.

Course Content

Module No	Details	Hrs
1	Differential Calculus Successive differentiations, n^{th} -derivative of Exponential, Trigonometric & Algebraic functions. Leibnitz's theorem (without proof) and related examples.	05
2	Expansion of functions, Taylor's series, Maclaurin's series and examples. Indeterminate forms $\frac{0}{0}$, $\frac{\infty}{\infty}$, $0 \times \infty$, $\infty - \infty$, 1^∞ , ∞^∞ , 0^0 Evaluation of limits using L' Hospital rule, Evaluation of limits using expansions of functions.	08
3	Partial Differentiations Partial differentiation, Partial derivatives of first and higher order, Total Differentiation, Differentiation of Composite & Implicit functions. Homogeneous Functions, Euler's Theorem on Homogeneous function with two & three independent variables (with proof), Deductions from Euler's Theorem.	08
4	Maxima & Minima of a function of two independent variables.	03
5	Complex Numbers Complex Numbers. Cartesian, Polar and exponential form of complex numbers. De- Moivre's Theorem. Expansion of $\sin(n\theta)$, $\cos(n\theta)$ in terms of powers of $\sin\theta$ and $\cos\theta$. Expansion of $\sin^n\theta$, $\cos^n\theta$ in terms of $\sin(n\theta)$, $\cos(n\theta)$.	06
6	Circular and Hyperbolic functions. Inverse Circular and Inverse Hyperbolic functions. Logarithmic functions, Roots of complex numbers.	06
7	Vector differentiation	06

	Scalar and vector point functions Gradient, Divergence and Curl, Solenoidal and Irrotational Vector Field. Directional Derivative, Angle between two surfaces.	
	TOTAL	42

Text Books:

1. Shanti Narayan (2005), "Differential Calculus", S.Chand Publications, 30th Edition, ISBN 8121904714, 572 Pages
2. B S Grewal (2014), "Higher Engineering Mathematics", Khanna Publications, 43rd Edition, ISBN 8174091955, 1315 Pages

Online Resource: SEAM Mobile Application, Google Play Store

Reference Books:

1. Erwin Kreyszig (2010), "Advanced Engineering Mathematics" Wiley Eastern Limited, Singapore 10th edition, ISBN 8126554231, 1148 Pages.

Prerequisites: Standard XII Physics

Course Objectives:

The main objectives of the course are

1. Introduction to electrical circuits and its analysis.
2. Introduction to single phase transformers and motors (DC and Induction)
3. Discuss various laws/ theorems to compute voltages and currents in DC circuits.
4. Introduce AC circuit analysis
5. Introduce construction and working principle of single phase transformers and Motors (DC and Induction)
6. Discuss three phase circuits for balanced load

Course Outcomes:

Students will demonstrate ability to

1. Analyse DC circuits
2. Analyse single and three phase AC circuits
3. Understand single phase transformer and Motors (DC and Induction)

Course Content

Module No	Details	Hrs
1	DC Networks Kirchhoff's laws, node voltage and mesh current methods; Delta-star and star delta conversion; Classification of Network Elements, Superposition principle, Thevenin's and Norton's theorems, Maximum Power Transfer theorem	06
2	A.C. Circuits: A.C. through resistance, inductance and capacitance, R-L, R-C, R-LC series and parallel circuits, phasor diagrams, power and power factor. Problems by analytical as well as graphical methods	06
3	Single Phase Transformer: Construction, working principal, Emf equation, Ideal and practical transformer, phasor diagrams, Equivalent circuit, O.C. and S.C. test, efficiency and regulation, All day efficiency.	04
4	Electrical Motors (No numerical expected): D.C. Motors: construction, working principal, Characteristics, emf equation, A.C. Motors: Rotating magnetic field theory, 3- ϕ Induction Motor. Single phase induction motor: Construction, working principal, double field revolving theory, split phase and capacitor start motors.	06
5	Three Phase Circuits: Three phase voltage and current generation, star and delta connections (Balanced load), Relationship between phase and line current and voltages, phasor diagrams, Measurement of power by two wattmeter method Problems by analytical as well as graphical methods.	06
	TOTAL	28

3. B.L.Theraja-'A Text Book of Electrical Technology',Vol-1, S. chand & co. New-Delhi,1st Edition(re Print), ISBN-81-219-2440-5
4. V.K.Mehta –'Basic Electrical Engg. & electronics ', S. chand & co. New-Delhi, 5th Edition, ISBN-81-219-0871-X, 903 pages.

Reference Books:

1. H. Cotton (2011), 'Advanced Electrical Technology', Wheeler Publication, Alahabad, ISBN 8190630717, 1293 Pages
2. Vincent Deltoro (1986), 'Electrical Engineering fundamentals', Pearson Education 2nd Edition New Delhi, ISBN 0132471310, 896 Pages

Prerequisites: Standard XII Physics and Mathematics

Course Objectives:

The main objectives of the course are

1. To understand the fundamental principles of solid geometry, this is the base of engineering Graphics.
2. To understand the concepts of projections of an object and various ways of projection for visualization of various engineering parts and components.
3. To develop competence in correct expression of the visualized objects.
4. To develop competence in use of AutoCAD as an effective tool for Engineering Graphics.
5. To provide an insight of the technical drawing.

Course Outcomes:

At the end of the course the students shall be able to

1. Students will be able to draw & solve the problems on curves, lines, planes, solids.
2. Students will be able to identify the various geometries.
3. Students will be able to differentiate line, planes, solids etc.
4. Students will be able to practice the drawing of orthographic, isometric, missing views & machine parts like nuts, bolt, screws etc views using AUTOCAD software

Course Content

Module No	Details	Hrs
1	Engineering Curves: Conics-Parabola, Ellipse, and Hyperbola. Involute, Cycloidal Curves: Cycloid, Epicycloid, Hypocycloid. Spirals, Helix etc.	4
2	Projection of points & lines inclined to both the reference planes. Traces of the Lines on the Reference Planes.	5
3	Projection of Planes inclined to both the Reference Planes	3
4	Projection of Right regular Solids: Regular Polyhedrons (Tetrahedron), Prisms, Pyramids, Cylinders, Cones inclined to both the Reference Planes	4
5	Orthographic Projections, Missing views. Isometric Projections using Natural Scale, four center method, method of points, typical practical problems	8

5. M.L.Dabhade (2004), 'Engineering Graphics', Association of Technical Authors, ISBN 8187575751, 772 Pages

Prerequisites: Standard XII Physics

<p>Course Objectives: The main objectives of the course are</p> <ol style="list-style-type: none"> 1. To introduce the students to the principles and methods of statics (mechanics), and to apply those fundamentals to solve the problems on statics. 2. To prepare the base for the students to study other engineering/structural engineering courses.
<p>Course Outcomes: At the end of the course the students shall be able to develop analytical skills to</p> <ol style="list-style-type: none"> 1. Determine the resultant of coplanar system of forces. 2. Solve the problems involving equilibrium of coplanar system of forces. 3. Analyse determinate beams using the principle of virtual work.

Course Contents:

Module No	Details	Hrs
1	<p>System of Coplanar forces: Introduction to coplanar & non-coplanar force system. Forces and their components. Moment of the force about a point, couple.</p> <p>Resultant of coplanar force system: Resultant of concurrent forces, parallel forces, non-concurrent non-parallel system of forces. Varignon's theorem.</p>	07
2	<p>Equilibrium of coplanar force system: Meaning of equilibrium, free body diagrams, equilibrium of concurrent, parallel and non-concurrent non-parallel (general) system of forces. Types of supports, determination of reactions at supports for various types of determinate beams.</p>	07
3	<p>Analysis of pin jointed frame / truss: Perfect truss, Imperfect truss, Analysis of truss by method of joints and method of sections.</p>	05
4	<p>Friction: Laws of friction, angle of friction, angle of repose, cone of friction, Equilibrium of bodies on rough horizontal and inclined plane, application to problems involving wedges, ladder. Belt friction- flat belts on the flat pulleys (Only problems, no derivation of formula).</p> <p>Self-Learning: Derivation of formula for Belt friction- flat belts on the flat pulleys.</p>	05
5	<p>Principle of virtual work: Application to determine the reactions of determinate beams with / without internal hinges.</p>	04
	TOTAL	28

Text Books:

2. Beer & Johnson (2013), “Engineering Mechanics”, Tata McGraw Hill, ISBN 1259062919, 470 pages.
3. F. L. Singer (1975), “Engineering Mechanics”, Harper & Row Publication, ISBN 0060462329, 724 pages.
4. Nelson (2009), “Engineering Mechanics”, Tata McGraw Hill, ISBN 0070146143
5. Shames (2006), ‘Engineering Mechanics’, Prentice Hall, India, ISBN 8177581236, 837 pages.

Prerequisites: XII Physics, Mathematics of differential equations.

Course Objectives:

1. To explain particle related properties of waves and wave related properties of particles, introduce students to Quantum mechanics basic concepts.
2. To explain Schrodinger's time dependent and time independent equations.
3. To analyse basic working principles of semiconductors and learn physics behind them.
4. To explore different crystal structures, crystal plane orientations in cubic structures, and determine crystal properties using X-rays.

Course Outcomes:

At the end of this course, students will be able to:

1. Learn basic differences between Newtonian mechanics and Quantum mechanics analyse particle properties of waves and wave nature of particles from different experiments, concept of wave function and analyse Heisenberg's uncertainty principle with the aid of examples.
2. Learn Schrodinger's time dependent and time independent equations and applications of these equations
3. Explain types of crystal structures using unit cell properties and crystal planes in cubic structures and learn the application of X-rays for determining these crystal structures and crystal planes.
4. Differentiate between the types of solids based on their band structure and understand the physics behind working of semiconductors and Hall effect in semiconductors

Course Content:

Module No.	Details	Hrs
1	Particle properties of waves Black body radiation, Photoelectric effect, Compton effect, X-ray diffraction, types of X-rays, continuous and characteristic spectrum.	6
2	Wave nature of particles Wave particle duality, de Broglie wavelength; experimental verification of de Broglie theory; properties of matter waves; wave packet, group velocity and phase velocity; Wave function, Physical interpretation of wave function. Heisenberg's uncertainty principle; Electron diffraction experiment and Gama ray microscope experiment; Applications of uncertainty principle.	6
3	Quantum Mechanics: Schrodinger's time dependent form, steady state form of Schrodinger's equation, Motion of free particle, Particle trapped in one dimensional infinite potential well.	8

4	<p>Introduction to solids: Basic concepts: Seven basic types of crystal systems, lattice, basis, crystal axes, unit cells, lattice parameters, co-ordination number, atomic packing factor, void space. Crystal structures: SC, BCC, FCC, Diamond and NaCl. Crystal planes and directions: Miller indices, drawing of crystal planes and directions in a simple cubic unit cell, interplanar spacing between planes, important planes of SC, BCC and FCC structures. Bragg's X-ray spectrometer, Applications in crystallography.</p>	5
5	<p>Band structure in solids: Band formation in solids and classification based on band theory. Fermi-Dirac statistics, concept of Fermi level and its variation with temperature, impurity and applied voltage. Carrier concentrations: intrinsic and extrinsic, carrier drift mobility, resistivity and Hall effect, carrier diffusion, Einstein's relations, current density and continuity equations.</p>	5

4. G Vijayakumari (2006), 'Engineering Physics', Vikas Publishing house, ISBN 9788125924098, 425 Pages.

Prerequisites: Basic knowledge Std. XII Chemistry

Course Objectives:

The main objectives of the course are

1. To introduce the students to basic knowledge of chemistry of water and lubricants
2. To introduce the student with different characterization technique
3. To introduce the student to theory, principles and mechanism of chemical processes.
4. To introduce the application of chemistry in engineering and technology

Course Outcomes:

At the end of the course the students shall be able to

1. Analyse water quality and application of water for fuel production.
2. List major chemical reactions that are used in the synthesis of molecules
3. Able to characterize material with different techniques
4. Determine chemical behaviour of different types of lubricants.
5. Learn Nano material and its application.

Course Content

Module No	Details	Hrs
1	Water: Hardness of water, types of hardness, units of Hardness, determination of hardness by EDTA method and numerical problems. Internal treatment of hard water. External Treatment of hard water by i) lime soda method with equations in general & Numerical problems. ii) Zeolite or permutit process & numerical problems. iii) Ion exchange method. Desalination of BRACKISH WATER - Reverse osmosis Ultra filtration and its industrial applications. Methods to determine extent of water pollution i) BOD. ii) COD Chemical Analysis of water with special reference to Total Dissolved Salts TDS Methods to control water pollution – activated sludge process for sewage treatment, flow sheet diagram for sewage treatment, water for energy and fuel production, electrolysis, hydrogen gas production	06
2	Lubricants: Definition, classification, functions, characteristic properties of an ideal lubricant with special reference to flash point, fire point, cloud point, pour point, Acid Value, saponification value and numerical problems on acid value & saponification value	04
3	Analytical technique for materials evaluation and characterization Atomic Force Microscopy (AFM), Auger Electron Spectroscopy (Auger). Energy Dispersive X-ray Spectroscopy Fourier Transform-infrared Spectroscopy, Gas Chromatography / Mass Spectrometry, Ion Chromatography, Scanning Electron Microscopy, Micro indentation Hardness Testing, Nano indentation Hardness Testing, Rockwell Hardness Testing, Scanning Electron Microscopy, Thermal Analysis (DSC, TGA), X-ray Photoelectron Spectroscopy, Metallographic Study, Rockwell Hardness Testing, UV,	06

	Fluorescence and its applications in medicine. ISO, EN, ASTM .	
4	Intermolecular forces and potential energy surfaces (4 lectures) Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H ₃ , H ₂ F and HCN and trajectories on these surfaces.	04
5	Nano –Materials and their synthesis Introduction to Nanomaterial synthesis , sonochemistry Graphite, Fullerenes, Carbon Nanotubes, Nanowires, Nano cones Haeckelites-structure & their electronic and mechanical properties Applications of Nano materials in – i) Medicine ii) Catalysis iii) Environmental Technologies iv) Electronics & related fields v) Mechanics , shock-absorber fluid, surface polishing fluid	04
	TOTAL	24

1. P.C.Jain & Monica Jain (2004), ‘Engineering Chemistry’, Dhanpat Rai publishing company Pvt. Ltd, 15th Edition, ISBN 8187433175, 1288 Pages
2. Emil Roduner (2006), ‘Nano Scopic Materials’, RSC Publishing, ISBN 0854048571, 285 Pages
3. Vasant Gowarikar (1986), ‘Polymer science’, New Age International Pvt Ltd, ISBN 0852263074, 505 Pages
4. Cotlon (1994), ‘Basic Inorganic Chemistry’, Wiley India, 3rd Edition, ISBN 0471505323, 856 Pages
5. Fundamentals of Molecular Spectroscopy, by C. N. Banwell
6. Chemistry: Principles and Applications, by M. J. Sienko and R. A. Plane
7. Engineering Chemistry (NPTEL Web-book), by B. L. Tembe, Kamaluddin and M. S. Krishnan

Prerequisites: Standard XII Physics

Course Objective:

1. Understand use of various network laws/ theorems
2. Analyse AC circuits
3. To perform experiments such as OC SC test, Load test on single phase transformer

Course Outcome:

The students will have

1. Ability to apply circuit theorems for DC circuit analysis
2. Analyse AC circuits and determine different parameters
3. Perform tests on single phase transformer to find equivalent circuit and efficiency of transformer with load variation.

List of Experiments:**Demonstration Experiments:**

1. Study of meters (Tachometer, voltmeter, ammeter, multi-meter, wattmeter etc.)

Experiments to be performed:

1. To analyse Mesh and Nodal circuits.
2. To verify Superposition Theorem to given circuit.
3. To verify Thevenin's & Norton's Theorems to given circuit.
4. To plot Graph between Power & Load using Maximum power transfer theorem.
5. To Determine Inductance & Internal Resistance of R-L circuits.
6. To Determine Capacitance of R-C circuits.
7. To plot Curves for Efficiency & Regulation by direct Loading of single phase transformer.
8. To carry out O.C. and S.C. test on a single phase transformer.

Term work:

Term work shall comprise of printouts of AutoCAD drawings consisting of 4 to 5 problems on each module according to theory syllabus.

1. Term work shall comprise of four to five problems on each module. Each problem solve on AutoCAD software.
2. Orthographic Projections, Sectional views of Orthographic Projections on AutoCAD software.
3. Isometric Projections using AutoCAD software.

Prerequisites: Standard XII Physics

Course Objectives:

1. The main objectives of the course are
2. To introduce the students to the experimental methods to verify the principles and methods of statics (mechanics).

Course Outcomes:

At the end of the course the students shall be able to

1. Develop collaborative skills to work in a team/group.
2. Experimentally verify the principles of statics (mechanics).

List of Experiments:

1. To find reactions of simply supported beam (Parallel force system)
2. To verify polygon law of forces (Concurrent force system)
3. To verify Lami's theorem using simple jib crane
4. Equilibrium of non-concurrent non parallel force system
5. To verify moment equilibrium condition using bell crank lever
6. To determine coefficient of friction using friction plane
7. To determine coefficient of friction using angle of repose method

Prerequisites: XII Physics, Applied Physics I (BSBT105) theory.

Laboratory Objectives:

1. To setup theory related laboratory experiments on optics, Lasers and semiconductors so as to apply his/her theoretical knowledge to a practical situation.

Laboratory Outcomes:

At the end of this course, students will be able to:

1. Explain unit cell properties of different crystal structures studied in the theory and identify different crystal plane orientations.
2. Calculate the velocity of sound in a given medium using ultrasonic interferometer.
3. Explain Hall effect in semiconductors.
4. Use a CRO to measure voltage and frequency of a given wave.

List of experiments conducted: (All five to be performed)

1. Demonstration of unit cell properties of different cubic structures.
2. Demonstration of important plane orientations and planar atomic densities of cubic planes.
3. Hall effect in semiconductors and to identify p and n type semiconductors.
4. Ultrasonic interferometer- measuring velocity of ultrasonic waves in a given medium.
5. Demonstration of using CRO and Lissajous figures.

Students will be given hands on training on application of X-ray diffraction in crystals at IIT Bombay and BARC.

Prerequisites: Applied Chemistry –I

Course Objectives:

The main objective of the course is

1. To introduce the students to basic knowledge of material chemistry.
2. To correlate theory with experiment.
3. Application of chemistry in engineering and technology.

Course Outcomes:

After successful completion of this course, the student will able to

1. The chemistry laboratory course will consist of experiments illustrating the principles of chemistry relevant to the study of science and engineering.
2. Carryout hardness of water sample and able to remove by using suitable method
3. Synthesize a small drug molecule and analyse a salt sample
4. Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc.

Term-Work:

List of Experiments: (Minimum 5 to be performed)

1. To Determine Total, Temporary & Permanent hardness of water sample.
2. Removal of hardness of water by Ion-Exchange Column.
3. To Determine COD of an effluent sample.
4. CO₂ from air by Orsat's method.
5. Determine Acid-Value of the given Lubricating Oil.
6. To Determine Saponification-Value of the given Lubricating Oil
7. To Determine Flash-Point/Fire-Point of lubricating oil
8. To determine ion exchange Capacity of ion exchange resin
9. To prepare Nano-Oxide using combustion method.
10. Determination of chloride content of water.

Prerequisites: Basic knowledge of carpentry, smithy, fitting, electrical wiring and welding.

<p>Course Objectives:</p> <ol style="list-style-type: none"> 1. To impart knowledge to students to develop their technical skill sets for creating entities from raw material. 2. To give “hands on” training and practice to students for use of various tools, devices, machines. 3. To develop ability of students to understand, plan and implement various processes and operations to be performed on the raw material to create object of desired shape and size. 4. To give exposure to inter disciplinary domains.
<p>Course Outcomes:</p> <p>Upon successful completion of the course the student will be able to</p> <ol style="list-style-type: none"> 1. Know various tools, machines, devices used in engineering practice for creating objects from raw material. 2. Know various operations in basic engineering shops. 3. Know various safety precautions to be taken during the various basic engineering operations. 4. Interpret job drawings, plan and execute processes and operations to produce basic components from raw material.

Course Content:

Module No.	Details	Hrs.
01	<p>Fitting (Compulsory):-</p> <ol style="list-style-type: none"> 1. Use and settings of fitting hand tools for marking, chipping, cutting, filing, center punching, hammering, drilling and tapping. 2. Term work to include one job: - Male –female joint involving above operations. 	18
02	<p>Carpentry (Compulsory):-</p> <ol style="list-style-type: none"> 1. Use and setting of carpentry hand tools like hacksaws, jackplanes, chisels and gauges for construction of various joints. 2. Term work to include one job involving a use of tools and operations : - Half Check joint. 	18
03	<p>Forging / Smithy (Demonstration):-</p> <ol style="list-style-type: none"> 1. One job: - Lifting Hook and Handle to be demonstrated by instructor to a batch 	09
04	<p>Welding (Demonstration):-</p> <ol style="list-style-type: none"> 1. Edge preparation for welding jobs, arc welding, different types of joints such as Lap Welding, Butt Welding etc. 2. One job each involving Lap welding and Butt welding of two plates to 	09

	be demonstrated by instructor to a batch.	
05	Electrical Board Wiring (Demonstration):- 1. House wiring, staircase wiring for fluorescent tube light, go-down wiring and three phase wiring for electrical motors.	09
06	Carpentry (Demonstration):- 2. Wood turning Demonstration to be demonstrated by instructor to a batch.	09
07	Machine Shop (Demonstration):- 3. One turning job to be demonstrated by instructor to a batch	09
	TOTAL	81

Term-work:

1. Every student has to perform one job from one compulsory trade and attend demonstration in two trades in each of semester I and II.
2. Term work shall comprise of 01 compulsory job and demonstration jobs (any two) performed in the semester and a 10 mark MCQ test/oral.
3. The syllabus of Basic Workshop Practice and term work to be done in Semester –I & II are given together.
4. The jobs for practice and demonstration are designed with the work of the course spread over two semesters.

COURSE CONTENTS

Semester II

**F. Y. B.Tech. (CIVIL /MECHANICAL/ELECTRICAL)
ENGINEERING**

Academic Year: 2019-2020

Prerequisites: Nil**Course Objectives:**

The main objectives of the course are

1. To Introduce Ordinary Differential Equations
2. To Introduce Gamma and Beta functions.
3. To Introduce Curve tracing and Rectification of curves.
4. To Introduce Multiple Integrals.

Course Outcomes:

At the end of the course the students shall be able to

1. Classify and solve differential equations in terms of ordinary/partial, Order, Exact, Linear.
2. Find the general solution of linear higher order linear differential equation with constant coefficients.
3. Evaluate integrals using Gamma functions, Beta functions.
4. Evaluate multiple integrals and apply them to find area, mass and volume.

Course Content

Module No	Details	Hrs
1	First Order and First Degree Ordinary Differential Equations Exact differential equations, Differential Equations which are reducible to the exact form by using integrating factors. First order linear differential equations and differential equations reducible to the linear form.	06
2	Higher Order Linear Differential Equations Higher Order Linear differential equations with constant coefficients. Complimentary Functions, Particular Integrals of differential equations of the type $F(D)y = Q(x)$. Cauchy's homogenous linear differential equations and Legendre's differential equations.	07
3	Applications of Differential Equations, Gamma and Beta functions Simple applications of differential equations of first and second order to Engineering problems. Gamma function, reduction formula. Beta function. Duplication formula, Relation between Gamma and Beta Functions and examples.	09
4	Rectification Curve tracing in Cartesian and Polar Coordinates. Rectification of plane curves.	04
5	Double Integrals Introduction to Double Integrals, Change of order of double integral.	07

	Evaluation of double integral by changing to polar coordinates.	
6	Triple Integrals Introduction to Triple Integrals, Evaluation of Triple Integrals using Cartesian, Cylindrical and Spherical polar coordinates.	05
7	Applications of Multiple Integrals Applications double integrals to find area and mass of lamina. Applications of Triple Integrals to find volume.	04

Prerequisites: Std. XII Physics

Course Objectives:

1. Discuss Electronics Devices Diodes, BJT , FET and their applications
2. Introduce Operational amplifier and its applications as an amplifier, adder, subtractor and voltage follower.
3. Introduce, Gates, Boolean Algebra and logic simplification

Course Outcomes:

Students will demonstrate ability to

1. Understand the characteristics of electronic devices like Diode, BJT and FET.
2. Appreciate use diodes in rectifiers and filters.
3. Design Operational amplifier applications
4. Apply Boolean algebra and implement digital circuits using basic gates.

Course Contents:

Module No	Details	Hrs
1.	Diode Applications: Half wave, Full wave, Bridge Rectifiers, Specifications of the devices required for C, LC, and CLC filter, Zener as a regulator.	08
2.	BJT configurations such as CE, CC, CB, Characteristics, BJT as a switch, BJT as an amplifier.	06
3.	Field Effect Transistors FET: JFET construction, characteristics (CS), FET as an amplifier	05
4.	Op amp as a basic block. Op amp as a inverting and on inverting Amplifier. Applications like adder, subtractor, voltage follower, etc.	05
5.	Digital Electronics Fundamentals: Difference between analog & digital signals, Basic & Universal Gates, Boolean algebra, Truth tables, Expressions, Logic simplification	04

Prerequisites: Standard XII Physics, ES-BT104, ES-BT154

<p>Course Objectives: The main objectives of the course are</p> <ol style="list-style-type: none"> 1. To introduce the students to the principles and methods of dynamics (mechanics), and to apply those fundamentals to solve the problems on dynamics. 2. To prepare the base for the students to study other engineering/structural engineering courses at a later stage.
<p>Course Outcomes: At the end of the course the students shall be able to develop analytical skills to</p> <ol style="list-style-type: none"> 1. Find the centroid and moment of inertia of plane areas. 2. Solve the problems on kinematics of particles. 3. Solve the problems on kinetics of particles and kinetics of rigid bodies.

Course Contents:

Module No	Details	Hrs
1	Centroid of Plane Areas: Concept of centroid of plane areas. Problems on centroid of composite areas.	03
2	Moment of Inertia: Moment of inertia of plane areas, parallel axis theorem. Introduction to polar moment of inertia, product of inertia and mass moment of inertia. Problems on moment of inertia of composite areas.	03
3	Kinematics of particle: Velocity and acceleration in terms of rectangular coordinate system, rectilinear motion, motion along plane curved path, tangential and normal component of acceleration, relative velocity, and projectile motion. (no derivations of formulas)	08
4	Kinetics of particles: Newton's laws of motion, D'Alembert's principle, equation of dynamic equilibrium, linear motion, curvilinear motion. Energy principles: Work done by a force, potential and kinetic energy, power, work energy equation, principle of conservation of energy.	03 04
5	Momentum principles: Momentum, impulse and momentum principle, principle of conservation of momentum, impact of solid bodies, elastic impact, semi-elastic impact and plastic impact. Kinetics of rigid bodies: D'Alembert's principle for bodies under rotational motion about a fixed axis.	05 02

4. Shames (2006), ‘Engineering Mechanics’, Prentice Hall, India, ISBN 8177581236, 837 pages.

Prerequisites: XII Physics, Mathematics of vector calculus.

Course Objectives:

1. To understand differential operator Del, theory of static electric and magnetic fields using principles of divergence and curls.
2. To learn Maxwell's equations and how he incorporated corrections in certain equations and Electromagnetic waves in vacuum.
3. To explain and interpret basic properties involved in thin film interference and diffraction.
4. To explain working principles of LASERs.

Course Outcomes:

At the end of this course, students will be able to:

1. Explain concepts of gradient, divergence, curls and to explain Gauss' law and Ampere's law in integral and differential form and the comparison between Electrostatic and magneto static fields.
2. Analyse electromagnetism before and after Maxwell, electromagnetic wave equations, explain concepts of Pointing vector and energy and momentum carried by electromagnetic waves.
3. Analyse thin film interference pattern using the concepts of wedge shaped fringes and Newton's rings and analyse Fraunhofer diffraction using single, double slits and a diffraction grating.
4. Explain different absorption and emission processes, population inversion condition and pumping schemes which differentiate LASERs from normal light sources and explain working of certain LASERs using these concepts and further explain application of LASERs in holography.

Course Content:

Module No.	Details	Hrs
1	Basic vector calculus and Electrostatics: Concept of gradient, divergence and curl. Fundamental theorems: of calculus, for gradients, for divergences and for curls. Coulomb's law, Gauss' law, divergence and curl of electrostatic fields, introduction to scalar potential, relation of potential with field.	6
2.	Magnetostatics Divergence and curl of B, BiotSavart law, magnetic vector potential. Comparison of Electrostatics and magnetostatics.	4
3	Electromagnetism and electromagnetic waves Electrodynamics before Maxwell, Maxwell's equations, Maxwell's	10

	equations in matter. The wave equation; Plane electromagnetic waves in vacuum, their transverse nature and polarization; relation between electric and magnetic fields of an electromagnetic wave; energy carried by electromagnetic waves and examples, Poynting vector, Momentum carried by electromagnetic waves.	
4	Optics Interference in thin films- equal thickness and wedge shaped films, Newton's rings. Applications. Types of diffraction, Fraunhofer diffraction through a single slit and diffraction grating, grating spectra, resolving power of a grating.	5
5	LASERS Absorption, spontaneous and stimulated emission, Einstein's coefficients. Terms Associated with Lasers: population inversion, metastable state, pumping and pumping schemes, active medium, and resonant cavity. Ruby laser, He-Ne Laser, Nd:YAG laser. Holography using LASERS.	5

Prerequisites: Basic knowledge Std. XII Chemistry

<p>Course Objectives: The main objectives of the course are</p> <ol style="list-style-type: none"> 1. To introduce the students to basic knowledge of alloy, fuel, green chemistry, corrosion and its protection 2. To introduce the student to theory, principles and mechanism of chemical processes 3. To introduce the application of chemistry in engineering and technology.
<p>Course Outcomes: At the end of the course the students shall be able to</p> <ol style="list-style-type: none"> 1. Analyse process of corrosion and its protection methods 2. Determine fuel characteristics, properties and their application 3. Implement use of green chemistry 4. Able to identify high performance materials

Course Content

Module No	Details	Hrs
1	<p>Corrosion and surface chemistry Definition, Types of corrosion-Dry or Chemical Corrosion, Wet or Electrochemical corrosion, Bi-metallic corrosion, Concentration cell corrosion-differential Aeration corrosion, Pitting Corrosion, Water Line Corrosion, stress Corrosion, Inter-granular Corrosion. Polarization, over voltage, Passivity, Factors affecting rate of corrosion. Electrochemical & Galvanic series, Protection from Corrosion: Cathodic and Anodic Protection, Cathodic and Anodic coatings, Galvanising & Tinning, Metal Cladding, electroplating. Corrosion in electronic devices and photonic devices.</p>	06
2	<p>Fuel: Calorific Value-Gross and Net Calorific Value, Conversion & numerical problems. Proximate and Ultimate Analysis of Fuels, numerical problems. Combustion-Calculations for given Solid, Liquid, and Gaseous Fuel Biodiesel-Methods to obtain Biodiesel. Cracking, Knocking, Octane Value of Petrol, Cetane Value of Diesel, Anti-Knocking Agents. Recent technologies for catalytic converter. Fuel cells and photovoltaic cells, types of fuel, proton exchange membrane, polymer electrolyte, solid oxide fuel cells</p>	06
3	<p>High performance polymers and Material's High-Performance Polymers for Engineering-Based Composites, New Smart Materials via Metal Mediated Macromolecular Engineering, Materials for Biomedical Applications, Engineering Thermoplastics, Semiconducting polymers, Semiconducting Polymers Towards Device Applications, High performance materials Silicon nitride</p>	04

4	Organic reactions and synthesis of a drug molecule (4 lectures) Introduction to reactions involving substitution, addition, elimination, oxidation, Reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule.	04
5	Green-Chemistry: Goal, Significance and 12-Principles of Green Chemistry with examples, Green Path Green-Reagents, SCFE, SCCO ₂ , green propellant – ultra pure H ₂ O ₂ . Industrial applications of Green-Chemistry. Numerical problems on percentage atom economy	04

Prerequisites: Basic Knowledge of computers

Course Objectives:

1. Master basic procedural programming constructs for decision and iteration.
2. Understand principles like decomposition, information hiding, and use of parameters and return values to create flexible components.
3. Understand major concept of object oriented programming like encapsulation and inheritance

Course Outcomes:

1. Remember Data types and apply basics of Control Structures to programming.
2. Design programs using functions, arrays, strings.
3. Understand and apply the knowledge of OOPS to write programs
4. Apply debugging to already existing codes.

Course Contents

Module No	Details	Hrs
1	Basics of Programming: Defining problem statement, solution development using Algorithmic approach. Basic concepts of computer structure and program execution.	01 01
2	Basic Data Type: Concept of Variables and constants, Data types, expressions, and assignment, Input / Output from console. Control Structure: Conditional execution – if/else, Switch, Break, Continue. Iteration – do-while, for, while.	02 03 03
3	Functions: Defining Functions- Procedural decomposition of problems, localizing variables, parameter passing– value and reference, return values. Special Functions Concepts: Recursive functions and function overloading.	04 03
4	Arrays: Arrays – one-dimensional, Multidimensional Strings	03 02
5	Introduction to structures Introduction to Object Oriented Programming Object Oriented Language concepts – classes, objects, Constructor and Destructors. Inheritance – Access specifiers, Types of Inheritance with examples.	01 02 03

Prerequisite: Passed 12th English

Course Objectives:

1. To identify the basics of grammar so as to help improve communication and speak a neutral and correct form of English. The focus is to assist the students entering the technical field to acquire proficiency in language and technical vocabulary.
2. To make the learners capable of understanding importance of communication and understand the verbal and non-verbal forms of communication so as to create an understanding of the barriers to communication and to overcome them in Social and Professional sphere.
3. To acquaint the students with different flows of communication in an organization and to make them proficient with the effective use of communication channels.
4. To guide and teach the students the appropriate language skills with the purpose of improving the existing LSRW, and make the student proficient in public speaking and presentation skills.
5. To make the learner capable of creating official correspondence through principles of business correspondence for effective communication in the global world

Course Outcomes:

1. Understand and evaluate information they read, write and listen to and express their ideas with greater clarity in personal and professional life.
2. Speak and respond effectively along the various channels and forms of communication in an organization.
3. Students will inculcate effective listening, writing, reading and speaking skills and be equipped to express ideas in an effective manner and learn interpersonal skills.
4. Communicate through result oriented writing both within and outside the organization. In real life situations, students can learn to effectively communicate in various social and professional situations, and develop new perspectives. He or she can learn to participate and contribute to technical and non-technical discussions.

Course Content:

Module No.	Details	Hrs
01	Building advanced vocabulary: Common errors, Pairs of confused words, Enriching vocabulary through Synonyms, antonyms, words through situations, one word substitution, Comprehending technical passages, journal papers, articles to test the analytical skills and expression.	03
02	Fundamentals of Communication: Meaning, Definitions, Components, Objectives, Importance of communication, Purpose of Professional Communication, Barriers to Communication (Cultural, Semantic, Psychological, physical, mechanical, organizational), Different Forms of Communication: Verbal, Non-Verbal, Intrapersonal, Interpersonal, Extra- Personal,	12
03	Communication Network in a Business Organization: Different types of communication flow: Internal, External, Upward, Downward, Horizontal, Grapevine, Problems and Solutions. Video conferencing and Netiquettes	03

04	Techniques to Improve Communication: Reading, Writing, Listening and Speaking: <ul style="list-style-type: none"> • Reading Skills – Barriers to Reading and Techniques to improve reading • Speaking Skills – Voice Modulation, Good Pronunciation,-Speaking without Fear, -Extempore & Prepared Speaking, role play in different Situations. How to present effective speeches through Talk power Program. • Listening Skills – Barriers to Listening, Listening & Note taking. • Writing Skills – Barriers and Techniques to improve writing skills 	06
05	Business Correspondence: (Letter Writing) Introduction, Importance, Layout, Elements of style and Language, Principles of Business Correspondence, Types of formats-3, Types of letters: Routine letters, Enquiry and Reply, Order, Complaint and Adjustments, Sales Letters.	08

Text Books:

1. Communication in Organizations, Dalmar Fisher, Jaico Publishing House, Edition 2nd.
2. Business Communication: Connecting at work, Hory Shankar Mukherjee, Oxford University Press, 1st Edition
3. Communication Skills, Meenakshi Raman & Sangeeta Sharma, Oxford University Press, 1st Edition
4. Business Correspondence & Report-writing, R.C. Sharma & Krishna Mohan, Tata McGraw Hill, 2nd Edition.

Reference Books:

2. <https://msu.edu/course/be/485/bewritingguideV2.0.pdf>; Faculty of MSU; Michigan State University.
3. <http://www.bizmove.com/books/how-to-improve-your-nonverbal-communications-skills.pdf>; BizMove Management Training Institute

Prerequisites: XII Physics, Applied Physics II (BSBT205) theory.

Laboratory Objectives:

1. To setup theory related laboratory experiments on crystal physics and magnetism so as to apply his/her theoretical knowledge to a practical situation.

Laboratory Outcomes:

At the end of this course, students will be able to:

1. Explain the applications of thin film interference using Wedge shaped films experiment and Newton's Rings.
2. Explore the visible spectrum using a diffraction spectrometer and find the wavelength range.
3. Understand the use of Lasers and Optical fibers in the field of Physics and Engineering.
4. Explain Hysteresis phenomenon in ferromagnetic materials plotting hysteresis curve.

List of experiments conducted: (Any five to be performed)

1. Finding thickness of paper using wedge shaped films setup.
2. Finding radius of curvature of lens using Newton's rings setup.
3. Finding wavelength of different colours of mercury spectrum using principle of diffraction through a grating.
4. Finding grating element using diode lasers.
5. Hysteresis curve of a ferromagnetic material.
6. Photoelectric effect.

Prerequisites: Applied Chemistry –II

Course Objectives:

The main objective of the course is

1. To introduce the students to basic knowledge of material chemistry.
2. To correlate theory with experiment.
3. Application of chemistry in engineering and technology.

Course Outcomes:

After successful completion of this course, the student will be able to

1. Find out composition of metals in different alloy.
2. Prepare and characterize new composite material.
3. Prepare bio-diesel from edible oil.

TERM-WORK:

1. List of Experiments: (Minimum 5 to be performed)
2. Estimation of Cu iodometrically.
3. Estimation of Zn complexometric titration.
4. Estimation of Ni complexometric titration.
5. Estimation of Al complexometric titration.
6. Calorific value of solid or liquid fuel using Bomb calorimeter.
7. Thin layer chromatography
8. Determination of chloride content of water
9. Estimation of Sn iodometrically
10. Preparation of biodiesel from edible oil.
11. Synthesis of simple layered materials and their characterization.
12. Preparing simple composites and their characterization.

Prerequisites: Computer Programming

Course Objectives:

1. Write and debug small programs.
2. Manipulate various Data types and Apply basic programming concepts like loops, functions, arrays in programs.
3. Apply Object Oriented programming approach to various problem statements.

Course Outcomes:

1. Construct programs using Control Structures.
2. Implement the use of functions and Arrays in C++ language.
3. Carry out programming using different features of OOPs.

List of experiments: (preferably six to be performed)

1. To Write C-Programs Using Operators and Expressions.
2. To Write C-Programs Using If-Else statement.
3. To Write C-Program Using While, Do-While loops.
4. To Write C-Program Using FOR loop.
5. To Write C-Program Using Functions.
6. To Write C-Program Using Special Functions
7. To Write C-Program Using Arrays.
8. To Write C-Program Using Strings.
9. To Write C-Program Using classes and objects.
10. To Write C-Program Using Inheritance.
11. Mini projects incorporating all the above topics

Prerequisites: Basic knowledge of carpentry, smithy, fitting, electrical wiring and welding.

Course Objectives:

1. To impart knowledge to students to develop their technical skill sets for creating entities from raw material.
2. To give “hands on” training and practice to students for use of various tools, devices, machines.
3. To develop ability of students to understand, plan and implement various processes and operations to be performed on the raw material to create object of desired shape and size.
4. To give exposure to inter disciplinary domains.

Course Outcomes:

Upon successful completion of the course the student will be able to

1. Know various tools, machines, devices used in engineering practice for creating objects from raw material.
2. Know various operations in basic engineering shops.
3. Know various safety precautions to be taken during the various basic engineering operations.
4. Interpret job drawings, plan and execute processes and operations to produce basic components from raw material.

Course Content:

Module No.	Details	Hrs.
01	Fitting (Compulsory):- 1. Use and settings of fitting hand tools for marking, chipping, cutting, filing, center punching, hammering, drilling and tapping. 2. Term work to include one job: - Male –female joint involving above operations.	18
02	Carpentry (Compulsory):- 1. Use and setting of carpentry hand tools like hacksaws, jackplanes, chisels and gauges for construction of various joints. 2. Term work to include one job involving a use of tools and operations:- Half Check joint.	18
03	Forging / Smithy (Demonstration):- 1. One job: - Lifting Hook and Handle to be demonstrated by instructor to a batch	09
04	Welding (Demonstration):- 1. Edge preparation for welding jobs, arc welding, different types of joints such as Lap Welding, Butt Welding etc. 2. One job each involving Lap welding and Butt welding of two plates to	09

	be demonstrated by instructor to a batch.	
05	Electrical Board Wiring (Demonstration):- 1. House wiring, staircase wiring for fluorescent tube light, go-down wiring and three phase wiring for electrical motors.	09
06	Carpentry (Demonstration):- 1. Wood turning Demonstration to be demonstrated by instructor to a batch.	09
07	Machine Shop (Demonstration):- 1. One turning job to be demonstrated by instructor to a batch	09
	TOTAL	81

Term-work:

1. Every student has to perform one job from one compulsory trade and attend demonstration in two trades in each of semester I and II.
2. Term work shall comprise of 01 compulsory job and demonstration jobs (any two) performed in the semester and a 10 mark MCQ test/oral.
3. The syllabus of Basic Workshop Practice and term work to be done in Semester –I & II are given together. The jobs for practice and demonstration are designed with the work of the course spread over two semesters.

Reference Books:

1. W. A. J. Chapman, “*Workshop Technology- Part I, II and III*”, Edward Arnold.
2. G. Boothroyd & W.A. Knight, “*Fundamental of Machining and Machine Tools*, third edition”, CRC.
3. S K & A K Hajra Choudhary, “*Workshop Technology, Vol. I, II*”, Media promoters and publishers pvt. Limited, 2007.

Prerequisite: successful completion of SEM. I Basic Electrical Engineering lab course.

Course Objectives:

With the help of hands on circuits in the lab, verify characteristics and application of basic devices used in electronics.

Course Outcomes:

Students will demonstrate the ability to

1. Handle basic components in electronics laboratory.
2. Understand, use and select the components based on the required application.
3. Connect, test and trouble shoot the circuits

Course Contents:

Module	Details	Hours
1	Handling basic circuit components, breadboards, meters, SG, DSO etc. with the help of simple circuits.	2
2	Use of power supply circuit components (rectifier filter regulator)	6
3	To plot BJT, FET Characteristics based on practical values observed.	6
4	Hands on with op-amp circuits (Op-amp as inverting, non-inverting amplifier, buffer, adder subtractor etc.)	10
5	Solving Boolean expression and implementing the same with hands on.	6
	TOTAL	30

Text Books:

Prerequisite: Nil**Course Outcomes:**

1. To understand constitutional ethos and principles
2. To co-relate with political system and constitutional tenets
3. To inculcate and pursue the values of civic life
4. To exercise their rights and duties with rationale

Course Contents:

Module No	Topics	Hrs.
1	Historical background of constitution Philosophy of constitution	6
2	Fundamental Rights – Duties Directive principles – with respect to issues	6
3	Separation of powers Law making procedure	4
4	Party system – Electoral dynamics Challenges to constitutional democracy	5
5	Judicial Administration Working of quasi – judicial bodies	5
6	Amendment process and language Local self-government	5
7	Core issues (Uniform civil code, Article 370, Reservation) Landmark cases – Nanavati case, Shah Bano, Keshvanand Bharti Vishakha Case etc.	5
	TOTAL	36

Books Recommended:
