

SEM VII-COURSE CONTENTS

AY 2021-22

Design of Concrete Structures

Course Code	Course Name
PC-BTC 701	Design of Concrete Structures

Course pre-requisites	PC-BTC604
-----------------------	-----------

Course Objectives

The objectives of this course are

1. To develop Civil Engineering graduates having clear understanding of concepts, and practical knowledge of modern Civil Engineering techniques
2. To apply the structural analysis knowledge to design real life RCC structures for safety serviceability and economy.
3. To achieve effective communication, inculcate leadership and ethics to deal with social, environmental and economic issues

Course Outcomes

Upon successful completion of the course, students should be able

1. To design buildings, water tanks, retaining wall for safety, stability and economy.
2. To prepare detailed drawings ready for construction.
3. To comply with regulations and requirements of RCC design as per relevant IS codes
4. To act as catalyst in transferring the Civil Engineering knowledge to field usage for the socio-economic development of the society.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Design of staircases: (limit state method of design) Design of Dog legged, Open well type staircase	05
2	Design of Flat Slabs: (limit state method of design)	06
3	Complete design of residential, commercial or Industrial building including staircase and foundations. (Limit state method of design)	05
4	Complete design of residential, commercial or Industrial building including staircase and foundations. (Limit state method of design). Overview of ductile detailing for Earthquake resistant structures.	05
5	Design of retaining walls: (limit state method of design) Design of Cantilever, Counter fort type retaining wall.	05
6	Design of water tanks: Circular and rectangular, at ground level,	05

	underground and overhead water tanks	
7	Design of water tanks: Circular and rectangular, at ground level, underground and overhead water tanks both by IS coefficient and - approximate methods, including supporting structure for overhead water tanks Self Learning: Design of underground water tank	05
Term Work		
Design report and at least four A3 size drawings sheets for three projects covering the above syllabus shall be submitted as term work. All drawing work to be done in AUTOCAD. Exposure to design by available software for design is also to be considered. The above mentioned work shall be submitted as term work.

Sr. No.	Examination	Module
1	T-I	1, 2
2	T-II	3, 4
3	End Sem	1 to 7

Advanced Structural Analysis

Course Code	Course Name
PE-BTC721	Advanced Structural Analysis

Course pre-requisites	Structural mechanics, Structural Engineering
------------------------------	--

Course Objectives

The main objectives of the course are;

1. To impart clear understanding of concepts & practical knowledge of advanced and conventional methods of analysis required to design various types of civil engineering structures.
2. To apply stiffness matrix method to analyse various real-life structures required to design of safe & economic structures.
3. To understand development of commercial software using stiffness matrix method

Course Outcomes

At the end of the course the students shall be able to,

1. Analyse various types of structures, using stiffness matrix method.
2. Analyse pin jointed/rigid jointed plane frames (including frames with inclined members) subjected to different loadings including settlement of supports, temperature changes and elastic supports by flexibility method.
3. Analyse framed structures using conventional methods for preliminary design of structure.
4. Construct the ILD for indeterminate beams
5. Use computer software (SAP/ETABS) for analysis of various real-life structures

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	<p>Introduction to Stiffness Method in Matrix Form:</p> <p>Basic concepts of stiffness coefficients, member stiffness matrix for member of plane truss, member of rigid jointed plane frame, member of plane grid and member of space frame.</p> <p>Properties of stiffness matrix, co-ordinate transformation matrix, stiffness matrix in local and global co-ordinate axes system, assemblage of structural stiffness matrix and application of boundary conditions.</p>	06

	Self-Learning: ILD for indeterminate beams.	
6	Approximate Methods for Analysis of Building Frames: Approximate methods for gravity loads: Substitute frame and equivalent frames. Approximate methods for lateral loads: Portal and cantilever method.	03
7	Plastic Analysis of Steel Structures: Application to single bay single story rectangular frames.	03
Term Work		
At least 20 (twenty) solved problems based on the above syllabus shall be submitted as term work. Exposure to computer aided analysis using available software.

3	End Semester	1 to 7

Structural analysis by Matrix methods

Course Code	Course Name
PE-BTC 722	Structural analysis by matrix methods

Course pre-requisites	
------------------------------	--

Course Outcomes

Upon successful completion of the course, students should be able

1. Analyse Plane Trusses, and Continuous Beams using Matrix Stiffness Method.
2. Analyse Plane Frames, and Grids .
3. Analyse Space Trusses and Space Frames .
4. Use computer Programs for analysis of Framed Structures.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Introduction: Matrix methods for skeletal structures, Basic considerations of structural analysis, Boundary conditions, Flexibility Method, Displacement Method, Stiffness relationships	05
2	Matrix Displacement Method Bar element with axial force, Member stiffness matrix, Bar element subjected to torsion, Stiffness matrix of a beam element, Assembly of the structure stiffness matrix	06
3	Plane Frames. Trusses and grids Pin-jointed frames, Rigid jointed frames, inclined supports, Grid structures, Bandwidth of stiffness matrix, Member Stiffness Relations in the Local Coordinate System, Coordinate Transformations, Stiffness in the Global Coordinate system	07
4	Loading Loading between joints, Effects of temperature change and lack of fit	05
5	Space Frames and trusses Pin-jointed space frames, Rigid-jointed space frames, Structure Stiffness Relations	06
6	Programming for Stiffness Method Flow Charts, Continuous Beam Program, Plane Truss Program, Plane	07

	Frame Program, Space Truss Program, Introduction to software for analysis

Surface Hydrology (Hydrology and Flood Control)

Course Code	Course Name
PE-BTC731	Surface Hydrology (Hydrology and Flood Control)

Course pre-requisites	
------------------------------	--

Course Objectives

The objectives of this course are

1. to discuss scope of hydrology and hydrologic parameters and introduce the basic components of the hydrological cycle and discuss the water balance model.
2. Give an account of the different components evapotranspiration, precipitation, interception, run off, stream flow.
3. to summarize hydrographs along with estimation and design flood control methods.
4. to describe reservoir and channel routing techniques and its applications.

Course Outcomes

Upon successful completion of the course, students should be able

1. to estimate precipitation, runoff and water losses along with stream flow measurements by various techniques.
2. to carry out the flood estimation, its routing techniques along with importance of flood frequency studies and apply probabilistic as well as stochastic methods in flood estimation.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Introduction: Hydrological cycle, scope of hydrology, water budget equation, sources of data, Introduction to climate change.	03
2	Precipitation and Water Losses: Measurement, rainfall records, missing data, mass curve analysis, station year method, depth - area - duration relationship, intensity - duration - frequency relationship. Water losses:Evaporation, evapotranspiration, interception, initial loss, infiltration. Determination of water losses.	06
3	Streamflow's and Runoff: Stream gauging techniques, latest methods of measuring depths, current meter-types-calibration, mid-section and mean section methods, rating curves. Runoff: Factors affecting runoff, rainfall-runoff relationship, runoff estimation.	06
4	Hydrograph analysis: Characteristics, base flow separation, unit hydrograph, S-hydrograph, complex hydrograph, synthetic hydrograph, dimensionless unit hydrograph, instantaneous unit hydrograph.	06
5	Floods and Flood routing:	06

Sardar Patel College of Engineering, Andheri (West), Mumbai 400058
Year: 2021-22

	Estimation, envelope curves, flood frequency studies, probability and stochastic methods, estimation of design flood, flood plains, flood hazards, flood control methods, limitations, risk-reliability and safety factor. Reservoir routing, channel routing.	
6	Hydrological forecasting: Introduction, General operation of flood forecasting, forecasting by unit hydrograph method.	06
7	Case studies: applications of basic principles to hydrology and flood control	03

Reference Books	
5.	Engineering Hydrology: K. Subramanya, Tata McGraw Hill Publishing Co. Ltd., New Delhi.

2	T-II	3, 4
3	End Sem	1 to 7

Air and Water Quality modeling

Course Code	Course Name
PE-BTC741	Air and Water Quality modeling

Course pre-requisites	EEl, EEII, EVS
-----------------------	----------------

Course Objectives

The objectives of this course are

1. Develop models based on the mass-balance approach
2. Predict the impact of the of external waste loading on different environmental matrices
3. Predict and generate future conditions under various loading scenarios or management/intervention action alternatives.

Course Outcomes

Upon successful completion of the course, students should be able

3. Understand the idea, methodology and basic tools of environmental modelling
4. Understand the different modelling approaches, their scope and limitations.
5. Understand the fate and transport of pollutants.
6. Become aware of a wide range of applications of modelling in environmental management & decision making.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Introduction Environmental modeling: scope and problem definition, goals and objectives, definition; modeling approaches– deterministic, stochastic and the physical approach; applications of environmental models; the model building process	05
2	Elementary concepts, laws, theories and processes The building blocks: extensive and intensive properties, properties relevant to of environmental systems, the material balance approach; the transport processes–advection, diffusion, dispersion, gravitational settling, transport in porous media; the transformation processes–the non-reactive processes, the reactive processes; simulation of transport and transformation processes– introduction, the completely stirred tank reactor, plug flow reactor, mixed flow reactor models; the general material balance models.	10
3	Water Quality Modeling Water quality modeling: surface water quality modeling – lakes and impoundments, rivers and streams, estuaries; ground water pollution modeling.	04
4	Air Quality Modeling	04

Sardar Patel College of Engineering, Andheri (West), Mumbai 400058
Year: 2021-22

	Air quality modeling: the box model, the Gaussian plume model point sources, line sources, area sources; special topics; Gaussian puff model.	
5	Software's in water quality modeling Understanding WASP, QUAL2E, Modflow	04
6	Software's in air quality modeling Understanding AERMOD, CMAQ, CLINE, HEM	04
7	Case studies Understanding application of models on ground by various research papers	05

3	End Sem	1 to 7

Pavement Design and Construction

Course Code	Course Name
PE-BTC761	Pavement Design and Construction

Course pre-requisites

Course Objectives

The objectives of this course are

1. To acquire the knowledge about distribution of stress within the pavement
2. To discuss the methods available for design of pavements and utilize the knowledge for implementation.
3. To summarize the importance of strengthening existing pavements and implementation of knowledge for its application.

Course Outcomes

Upon successful completion of the course, students should be able

1. To acquire the knowledge about distribution of stress within the pavement
2. To summarize the methods available for design of pavements and utilize the knowledge for implementation. To understand the importance of strengthening of pavements and implementation of knowledge for its application.

Course Content

Module No.	Details	Hrs.
1	Pavement structure and functional attributes, factor affecting pavement design, types of wheel loads for highways, Classification of Pavement Design Methods. Stresses in flexible pavements, 1-layer, 2-layer, 3-layers theories, EWLF, ESWL, Stresses in Rigid pavement: wheel load and temperature stresses, combined stresses.	06
2	Flexible Pavement Design: i. Testing of subgrade soils.	08

	<p>ii. Empirical methods using no soil strength criteria, GI method,</p> <p>iii. Empirical method based on soil strength criteria: CBR method as specified by IRC: 37: 2001 & IRC: 37: 2012, Fatigue and rutting as a failure criterion, Analysis of flexible Pavement using IITPAVE software.</p>	
3	<p>Rigid Pavement Design:</p> <p>Comparison of Flexible and rigid pavements, Design of Rigid Pavement using IRC: 58:2002, IRC: 58:2011, axle load survey.</p>	07
4	<p>Road Construction:</p> <p>Construction of different layers of Flexible Pavements, size and gradation of aggregate, material selection, Economics in construction.</p> <p>Mix design, concrete strength, size of aggregates, and gradation, and workability, preparation of base form work, mixing, transporting, placing, compaction, finishing and curing, classification of joints.</p> <p>Construction of Roller Compacted concrete pavements, Cell filled Concrete Flexible Pavements.</p>	05
5	<p>Distress Evaluation maintenance and strengthening:</p> <p>Flexible and rigid pavement distresses, condition and evaluation surveys, present serviceability index, roughness measurement, Benkaleman beam deflections & design of overlays using IRC: 81:1997,</p>	04
6	<p>Highway Drainage:</p> <p>Surface & Subsurface Drainage, Surface Drainage for Hilly Roads, Design of surface and subsurface drainage system.</p>	03
7	<p>Quality Control: Quality control test prior to construction and during construction on different pavement layer materials and pavement layers. frequency of tests.</p>	03
Term Work		
Term work shall comprise of		

At least 10 assignments shall be submitted as term work.

Advanced Foundation Engineering

Course Code	Course Name	
PE-BTC762	Advanced Foundation Engineering	
Course pre-requisites	Soil Mechanics, Foundation Engineering	
Course Objectives		
<p>In this course, students are taught about the higher level applications of the topics learnt during previous semesters in Soil Mechanics and Foundation Engineering. They will be exposed to the field applications in the form of completion and submission of mini projects.</p> <p>The objectives of this course are</p> <ol style="list-style-type: none"> 1. Highlight the importance of site exploration and characterization, purpose, scope and methods. 2. Apply the consolidation theory, use appropriate laboratory tests and field curves, introduce concept of quasi-consolidation 3. Predict the stress-strain behaviour of soil and estimate stresses in soil using various theories 4. Analyze and estimate bearing capacity and settlement of shallow foundations and estimate pile capacity by various methods 5. Explain methods and importance of ground improvement 		
Course Outcomes		
<p>Upon successful completion of the course, the learners should be able to</p> <ol style="list-style-type: none"> 1. Understand the significance and importance of geotechnical investigations and insist on proper implementation of the same in construction projects. 2. Plan and handle simple site projects based on the field data provided to them. 3. Apply the basics explained in earlier semester to complex and practical problems in design and construction of foundations. 4. Recommend the use of suitable ground improvement techniques where required. 		
Course Content		
<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	<p><u>Site Exploration and Characterization</u> Purpose and scope, influence of soil conditions and type of foundation on exploratory programme, project assessment, phasing of site exploration, excavation and boring methods of exploration, types of samplers and their design features, subsurface soundings – static and dynamic methods, planning of subsurface</p>	04

Sardar Patel College of Engineering, Andheri (West), Mumbai 400058
Year: 2021-22

	investigations, as per IS 1892, type and sequence of operations, bore logs, core logs and importance of logging, lateral extent and depth of exploration, interpretation of field and laboratory data.	
2	<u>Consolidation</u> Terzaghi's theory of one-d consolidation – derivation of equation (solution in detail need not be covered), estimation of C_c and C_v from laboratory tests, Estimation of P_c by various methods, field consolidation curves, Quasi- preconsolidation and secondary consolidation, practical applications.	08
3	<u>Stress and Strain Behaviour of Soils</u> Triaxial test - drained and undrained behaviour of sands and clays, failure criteria in soils - only Mohr - Coulomb's criteria, ideal, plastic and real soil behaviour, shear strength of sands and clays.	04
4	<u>Estimation of Stresses</u> Boussinesq's theory, vertical stress due to concentrated load, horizontal and shear stress due to concentrated load, Isobar diagram, vertical stress distribution on horizontal plane, influence diagram, vertical stress distribution on vertical plane, vertical stress due to line load, vertical stress under strip load, maximum shear stress at points under strip loads, vertical stresses under a circular area, vertical stress under a corner of a rectangular area, Newmark's influence charts, Westergaard's theory.	04
5	<u>Bearing Capacity and Settlement Analysis of Shallow Foundations</u> Modes of failure, failure criteria, – Terzaghi solutions, Vesic's solutions, IS Code recommendations, assumptions in estimates of ultimate loads, effect of shape, embedment of footing, eccentricity in loading, compressibility (including critical rigidity index), water table. Choice of factor of safety, settlement of foundations on sand – Schmertmann method, Plate load test, evaluation of bearing capacity using standard penetration test, Housel Method	08
6	<u>Pile Foundations</u> Use of load tests, Introduction to IS 2911 for estimation of single pile capacity by static and dynamic methods, Group capacity in sand and clay deposits, Separation of skin friction and end-bearing capacity. Settlement of single and group of piles.	05
7	<u>Ground Improvement</u> Improvement of deep cohesionless soils and cohesive soils	03

	(including stone columns / band drains), instrumentation – mainly pore pressure gauges and settlement gauges and their applications.	
Term Work		
Term work shall comprise of		
<ol style="list-style-type: none"> 1. Examination (MCQ) based on above topics 2. Site visit for better understanding various aspects of foundation engineering 3. Course project* <p>*Course Project: There will be a course project where the students will be able to apply and integrate the knowledge gained during the course. The projects will be developed by teams of two to four students.</p>

Rock Mechanics

Course Code	Course Name
PE-BTC763	Rock Mechanics

Course pre-requisites	Engineering Geology, Soil Mechanics
------------------------------	-------------------------------------

Course Objectives

The objectives of this course are

1. Introduce the subject of rock mechanics, explain some theoretical and practical aspects
2. Classify rocks and estimate stresses in rock
3. Discuss problems that arise in rock engineering

Course Outcomes

Upon successful completion of the course, the learners should be able to

1. Identify and quantify various engineering properties of rock.
2. Analyze their behavior under the application of loads
3. Provide solutions to problems arising during construction in or over rock
4. Apply their understanding of rock mechanics to help in the design of several structures such as tunnels, underground structures and foundations resting on rock.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Introduction to rock mechanics. Importance of rock mechanics to engineering problems. Rock types and rock structures	04
2	Geological and geophysical investigations, Stereographic plots of joints.	04
3	Classification of rocks – lithological, engineering. Classification of fissures, joints and faults, Engineering properties of rocks. Lab and site measurements	06
4	Definition of stress in rock, simple methods of determining in-situ stresses, induced stresses after excavation	04
5	Ground Response Curves (GRC) and Support Response Curves (SRC). Evaluation of in-situ rock stresses by borehole deformation and flat jack methods. Tunneling by Drill & blast methods Tunnel	08

	boring machine (TBM), NATM.	
6	Problems and remedies in rock engineering such as squeezing and rock-burst, Swelling and water pressure	04
7	Applications of rock mechanics – Tunnels, foundations, underground civic facilities, defense shelters, waste storage	06
Term Work		
Term work shall comprise of

Structural Dynamics

Course Code	Course Name
PE-BTC723	Structural Dynamics

Course pre-requisites	Mechanics of Materials
-----------------------	------------------------

Course Objectives

The objectives of this course are

1. To develop civil engineering graduates having clear understanding of concept of dynamic loads, dynamic analysis of structures.
2. To apply knowledge of structural dynamics to understand the behaviour & to find the response of various structures subjected to dynamic loads.
3. To apply knowledge of Random Vibration analysis to study the behaviour of structures.

Course Outcomes

Upon successful completion of this course students will be able to:

1. Distinguish between static and dynamic loads; understand different types of dynamic loads
2. Understand the elements of single degrees of freedom, concept of damping and free and forced vibrations; able to find the frequencies and free vibration response of single degree of freedom system.
3. Carry out the dynamic analysis of various types of single and multiple degrees of freedom lumped mass structures (Damped and un-damped) for different types of dynamic loads including ground motion in time domain.
4. Carry out the dynamic analysis of systems with distributed mass.
5. Understand the frequency domain analysis

Course Content

Module No.	Details	Hrs.
1	Introduction: Introduction to structural dynamics, definition of basic problem in Dynamics, static v/s dynamic loads, different types of dynamic loads.	02
2	Single degree of Freedom (SDOF) systems: Un-damped free vibration of SDOF system, natural frequency and period of vibration, damping in structures, Viscous damping and	10

	<p>Coulomb damping, effect of damping on frequency of vibration and amplitude of vibration, logarithmic decrement, computation of damping.</p> <p>Forced vibration, response to harmonic forces, periodic loading, dynamic load factors, and response of structure subjected to general dynamic load, Duhamel's integral, numerical evaluation of dynamic response of SDOF systems subjected to different types of dynamic loads.</p> <p>Distributed mass system idealized as SDOF system, use of Rayleigh's method, response of SDOF system subjected to ground motion.</p>	
3	<p>Use of Fourier Series for periodic forces, introduction to vibration isolation.</p> <p>Concept of Transmissibility.</p> <p>Introduction to frequency domain analysis, response of structure in frequency domain subjected to general periodic and non-periodic /impulsive forces of short duration, use of complex frequency response function, Fourier Response Integral, Discrete Fourier Transforms, Fast Fourier Transforms.</p>	03
4	<p>Generalized Single-Degree of Freedom System:</p> <p>Generalized properties, assemblages of rigid bodies, systems with distributed mass and elasticity, expressions for generalized system properties. Application to single span beams.</p>	07
5	<p>Free vibration of Lumped mass multi degree of freedom (MDOF) system:</p> <p>Coupled and uncoupled systems, direct determination of frequencies of vibration and mode shapes, orthogonality principle, vibration of MDOF systems with initial conditions, approximate methods of determination of natural frequencies of vibration and mode shapes-vector iteration methods, energy methods and use of Lagrange's method in writing equations of motion.</p>	04
6	<p>Force vibration of Lumped mass multi degree of freedom (MDOF) system:</p> <p>Decoupling of equations of motion, modal equation of motion, concept of modal mass and modal stiffness, forced vibration of MDOF system, modal analysis, and application to beams and multi</p>	07

	storey frames with rigid girders subjected to lateral dynamic loads.	
7	<p>Structure with distributed mass system:</p> <p>Use of partial differential equation, free vibration analysis of single span beams with various boundary conditions, determination of frequencies of vibration and mode shapes, forced vibration of single span beams subjected to the action of specified dynamic loads.</p>	03

Advanced Design of Steel Structures

Course Code	Course Name
PE-BTC724	Advanced Design of Steel Structures

Course pre-requisites	Design of steel structures
-----------------------	----------------------------

Course Objectives

The objectives of this course are

1. To develop clear understanding of concepts, and practical knowledge of modern Civil Engineering techniques for design of steel structures.
2. Use of various relevant IS codes for designing steel structures.
3. To encourage students and faculty to interact with industry, alumni and other reputed institutes for purpose of better understanding of industry requirements
4. To deal with social, environmental and economic issues

Course Outcomes

Upon successful completion of the course, students should be able

1. To understand the analysis and design concept of round tubular structures
2. To understand the design concept of different type of steel water tank
3. To understand the design concept of lattice tower and steel chimney
4. To understand the design concept of gantry girder
5. To develop clear understanding of the concepts and practical knowledge of modern Civil Engineering techniques for design of steel structures
6. Use of various relevant IS codes for designing steel structures

Course Content

Module No.	Details	Hrs.
1	Moment Resistant Beam End Connections: Design of moment resistant bolted and welded beam end connections.	04
2	Round Tubular Structural Members Properties of steel tubes, design of tension and compression members, design of welded connections, design of flexural members, analysis and design of tubular trusses including purlins	06

Sardar Patel College of Engineering, Andheri (West), Mumbai 400058
Year: 2021-22

	and supports.	
3	Elevated Steel Tanks: Loads acting on tanks including wind and earthquake, design of circular tanks with conical bottom, supporting ring beam, staging for circular tanks including design of columns and base plate.	06
4	Design of rectangular steel tanks including design of staging, columns and base plate	04
5	Gantry Girder: Loads acting on gantry girder. Analysis and design of gantry girder.	06
6	Lattice Tower: Different configurations of lattice towers, loads acting on lattice towers, analysis and design of lattice tower including welded or bolted connections for members.	04
7	Steel Chimney: Forces acting on chimney, design of self-supporting welded chimney and its components including design of base.	06

Text Books

1. Design of steel structures: Subramanian, Oxford Press.
2. Design of steel structures: Negi L.S., Tata McGraw Hill
3. Design of steel structures: Kazimi S.M. A. & Jindal R.S., Prentice Hall of India.
4. Design of steel structures: Krishnamachar B.S, &Ajitha Sinha D.
5. Design of steel structures: Arya and Ajmani, New Chand & Bros.
6. Design of steel structures, Vol I & II: Ramchandran, Standard Book House, New Delhi.
7. Design of steel structures: Dayaratnam, Wheeler Publication, New Delhi
8. Comprehensive design of steel structures: Punamia, A.K. Jain & Arun Kumar Jain, LaxmiPublicalions Pvt. Ltd.
9. Design of steel structures: I C Sayal&Salinder Singh, Standard Publishers & Distributors.

Hydraulic Modelling

Course Code	Course Name
PE-BTC732	Hydraulic Modelling

Course pre-requisites

Course Objectives

The main objective of this course is to introduce various concepts which will help in designing hydraulic models.

Course Outcomes

At the end of the course students will be able to understand model prototype relationship and basics of physical and digital modelling of hydraulic problems.

Course Content

Module No.	Details	Hrs.
1	Dimensional analysis: Similarity mechanics, model laws, distinction between numerical and hydraulic models, classification of hydraulic modelling, materials used in the model, scale effect, design, construction, operation and interpretation of the results.	06
2	Hydraulic Modelling: Types of modeling: Physical, numerical, data driven models.	05
3	Gravity dominated models	05
4	Gravity friction models	05
5	Friction dominated models	05
6	Study of open source hydraulic modeling software's	05
7	Applications to various case studies in Hydraulic modelling	05

Reference Books

P. Novak, V. Guinot, A. Jeffrey and D. E. Reeve (2010): Hydraulic Modelling – an Introduction, Principles, methods and applications, Spon Press (Taylor and Francis) 270 Madison Avenue, New York, NY 10016, USA

Sustainable Engineering & Technology

Course Code	Course Name	
PE-BTC742	Sustainable Engineering & Technology	
Course pre-requisites	Probability and Statistics, Environmental Science (mandatory course)	
Course Outcomes		
<p>Upon successful completion of the course, students should be able</p> <ol style="list-style-type: none"> 1. Gain knowledge about the fundamental concepts related to interaction of industrial and environmental/ecological systems, sustainability challenges facing the current generation, and systems-based approaches required to create sustainable solutions for society. 2. Have a broader perspective in thinking for sustainable practices by utilizing the engineering knowledge and principles 3. Understand the concepts of life cycle assessment (LCA) along with life cycle inventory (LCI) and life cycle impact assessment (LCIA) including the social and economic dimensions 4. Apply a life cycle assessment methodology to any real world problem. 		
Course Content		
Module No.	Details	Hrs.
1	Introduction Sustainability concepts and Life Cycle Analysis (LCA), material flow and waste management, importance of sustainability for engineers.	04
2	Risk And Life Cycle Framework Definition- risk, risk assessment, examples and characteristic of environmental problem	06
3	Life Cycle Assessment Detailed methodology and ISO framework - detailed example on LCA comparisons, LCA benefits and drawbacks, historical Development and LCA steps from ISO framework, life cycle inventory and impact assessments unit processes and system boundary data quality, procedure for life cycle impact assessment, LCIA in practice with examples, interpretation of LCIA results, factors for good LCA study - ISO terminologies, LCA steps recap, chemical release and fate and transport, and green sustainable materials LCA - Data Collection And Methodology Environmental data collection issues, statistical analysis of environmental data, common analytical instruments, overview of LCA methodology - goal definition, life cycle inventory, life cycle impact assessment, life cycle interpretation, LCA software tools	16

4	Design For Sustainability Environmental design for sustainability: economic, environmental indicators, social performance indicators, sustainable engineering design principles and environmental cost analysis.	05
5	Case Studies Architectural, environmental, transportation, water resources, and other areas	05

Text Books

1. Allen, D. T. and Shonnard, D. R., Sustainability Engineering: Concepts, Design and Case Studies, Prentice Hall.
2. Bradley. A.S; Adebayo,A.O., Maria, P. Engineering applications in sustainable design and development, Cengage learning
3. Environment Impact Assessment Guidelines, Notification of Government of India, 2006

Reference Books

4. Mackenthun, K.M., Basic Concepts in Environmental Management, Lewis Publication, London, 1998

Industrial Wastewater Treatment

Course Code	Course Name
PE-BTC743	Industrial Wastewater Treatment

Course pre-requisites	EE1, EEII
-----------------------	-----------

Course Objectives

The objectives of this course are

1. Analyse and understand the difference between Industrial and municipal waste and wastewater
2. Predict DO levels using Streeter Phelps modeling
3. Understand advanced treatment techniques for industrial waste effluents
4. Develop treatment schemes for industries such as pulp and paper, textile, tannery, dairy, electroplating, cane sugar and distilleries
5. Emphasize on inplant control and good housekeeping

Course Outcomes

Upon successful completion of the course, students should be able

7. Develop various units for treatment based on initial characterization
8. Analyse and develop schemes for various types of impurities present in the effluent
9. Predict DO at various stages in a river and suggest changes in the present industries
10. Understand environmental laws as a restrictive measure for pollution

Course Content

Module No.	Details	Hrs.
1	General: liquid wastes from industries – their volumes and characteristics, Effect of disposal into natural water courses, Municipal sewers and on land, River standards and effluent standards; Standards prescribed by MoEF (Stream water – I to IV) Lessons from history: a study of a few accidents/violations such as Minamata bay Japan screening of documentaries to ease the students into the course	06
2	Stream sanitation: Effects of industrial wastes on self-purification of streams and fish life, Aquatic bio system; Statement and significance of the parameters of Streeter and Phelps' equation and BOD equations, deoxygenation and reaeration, Oxygen sag, Case study of Eutrophication	06
3	Sampling and analysis of industrial wastes, Storage of Samples; Treatability study	
4	General treatment of industrial wastes: neutralization, equalization, segregation, MBBR, MBR, SBR, Natural Wetland system, RO, RO-MEE, Newer treatment flowsheets	02
5	Modification of conventional aerobic and anaerobic biological treatment methods. Dewatering and disposal of sludges – floatation, vacuum filtration, centrifugation, filter press, Inplant	06

	control measures for volume and strength reduction Selection of technology based on area, effluent characteristics, investment cost, maintenance issues, concept of zero liquid discharge	
6	Detailed consideration of wastes produced from following industries: Processes followed Volume of wastewater generated by specific industry and effects of raw and treated effluent on streams, sewers and land by wastewater of specific industry. Treatment methods and schemes for specific industry , reuse-recovery 1) Textiles: cotton and synthetic 2) Pulp & paper:- Sulphate process 3) Electroplating 4) Dairy 5) Sugar- sugarcane 6) Distilleries 7) Tanneries 8) Mining Pharmaceutical	14
7	Provision of various acts pertaining to industrial wastes / effluents, introduction to environmental impact assessment and environmental and water audit.	08

Text Books

1. Waste Water Treatment: Rao & Datta, Oxford & IBH Publishing Co.
2. Industrial Water Pollution Control: W W Eckenfelder Jr, Mc Graw Hill
3. Industrial Water Pollution Management: E F Gurnham, John Wiley
4. Biological Waste Treatment: Eckenfelder & Connor Pergamon Press
5. Theories and Practices of Industrial Waste Treatment: Adison Wesley
6. Pollution Control in Process Industries: S P Mahajan , Tata mcgraw Hill
7. Industrial Waste: W Rudolfs ,(Ed), L E C Publishers Inc
8. The Treatment of Industrial Wastes: E D Besselièvre Mcgraw Hill
9. Industrial Waste Disposal: R D Ross , (Ed), Reinhld Bok Corporation
10. Standard Methods of examination of water and wastewater, APHA, 2010
11. Anaerobic Sewage Treatment: A practical guide for regions with hot climate A.C. Handel and G. Lettinga

Engineering Risk and Uncertainty

Course Code	Course Name
PE-BTC751	Engineering Risk and Uncertainty

Course pre-requisites

Course Objectives

The objectives of this course are

1. To describe the concept of risk and uncertainty.
2. To understand basics Risk management.
3. To summarize the students about various techniques of mathematical models based on stochastic and statistical methods for risk management.

Course Outcomes

Upon successful completion of the course, students should be able

1. An idea of how risk management and analysis is done on modern construction projects.
2. To apply the mathematical models based on stochastic and statistical methods for risk management.
3. To develop risk mitigation Plan in construction projects.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Basic concept of Risk & Uncertainty, Risk in Civil engineering and mainly in construction, Difference between Risk and Uncertainty, Types of risks in constructions. Importance of Risk, quantifiable and un-quantified risks. Risk analysis and Management for projects (RAMP)	06
2	Performance Measures, Scope of risk control during project life cycle. Risk Registers. Risk Mitigation – by elimination, reducing, transferring, avoiding, absorbing or pooling. Residual risk, mitigation of unqualified risk. Coverage of risk through various policies, role of insurance in risk management.	06
3	Risk analysis in construction projects, Risk Registers, Risk priority number, Risk identification, and analysis & response measures.	06
4	Use of mathematical models based on stochastic and statistical methods, Probabilistic Risk Assessment.	06
5	Decision making under Risk & Uncertainty, Sensitivity analysis, Break even analysis, Scenario analysis and Decision tree analysis. risk profile method, Certainly equivalent method; risk adjusted discount rate method, certainty index method, 3 point estimated method.	06
6	Concept of simulation, Monte Carlo simulation, Use of simulation in risk identification, analysis and mitigation.	06

Text Books

Infrastructure Planning and Management

Course Code	Course Name
PE-BTC752	Infrastructure Planning and Management

Course pre-requisites

Course Objectives

The objectives of this course are

1. To describe the role of Infrastructure in the development of nation.
2. To understand basics of infrastructure planning and management.
3. To summarize the students about emerging trends in infrastructure.

Course Outcomes

Upon successful completion of the course, students should be able

1. To plan and manage the Infrastructure project.
2. To use the various policies for effective implementation of Infrastructure projects.

Course Content

Module No.	Details	Hrs.
1	Introduction: Definition of basic terminologies, role of infrastructure in economic development, types of infrastructure, measurement of infrastructure capacity, bases for quantification of demand and supply of various types of infrastructure, Indian scenario in respect of adequacy and quality.	04
2	Infrastructure Planning: Goals and objectives of infrastructure planning; Identification and quantification of the casual factors influencing the demand for infrastructure; review and application of techniques to estimate supply and demand for infrastructure	05
3	Infrastructure Planning: use of econometric, social and land use indicators and models to forecast the demand and level of service of infrastructure and its impact on land use; critical review of the relevant forecasting techniques	05
4	Infrastructure Planning: infrastructure planning to identify and prioritize preferred areas for development; Integration of strategic planning for infrastructure at urban, regional and national levels; case studies in infrastructure planning.	05
5	Infrastructure Management: Concepts, Common aspects of urban and rural infrastructure management systems; pavement and bridge management systems	05
6	Integrated infrastructure management, Case studies; Emerging trends in infrastructure, Overview of Public-Private Participation in infrastructure projects, Understanding stakeholders' concerns, regulatory framework, risk management in infrastructure projects,	06
7	Public policy for infrastructure: Sectoral Overview Highways, railways, waterways, airports, urban and rural infrastructure: roads,	06

	housing, water supply, sanitation – case study examples.

Economic policies of India

Course Code	Course Name
OE-BTC711	Economic policies of India

Course pre-requisites

Course Objectives

The objectives of this course are

1. To make Civil Engineering students aware about the economic policy of India to become a good project manager.

Course Outcomes

Upon successful completion of the course, students should be able

1. Civil Engineering students will gain knowledge about the economic policy of India and financial management.
2. Students will be able to understand the role of economics and policies in construction sector.

Course Content

Module No.	Details	Hrs.
1	Introduction: Brief introduction about RBI, NITI Aayog, Economic planning, Ministry of Finance, Indian federal system.	03
2	Economic policies of India: Industrial Policy, Trade Policy, Monetary Policy, Fiscal Policy, Indian Agricultural Policy, National Agricultural Policy, Industrial Policies, International Trade Policy, Exchange Rate Management Policy, and EXIM Policy.	06
3	Policies designed to create <u>economic growth</u> : Policies related to <u>development economics</u> , Government policies on water conservation and water resources planning and management, Disaster management.	06
4	Policies dealing with the <u>redistribution</u> of income, property and/or wealth.	05
5	<u>Regulatory</u> policy, <u>anti-trust</u> policy, <u>industrial policy</u> and technology-based economic development policy.	06
6	Macroeconomic stabilization policy: <u>Stabilization policy</u> , <u>money supply</u> , inflation, Monetary policies, Money in circulation, interest rates.	06
7	Case studies: Economic policies of India and Construction sector.	04

Entrepreneurship, Innovation and Design thinking

Course Code	Course Name	
OE-BTC712	Entrepreneurship, Innovation and Design thinking	
Course pre-requisites		
Course Objectives		
Enable graduates to: <ol style="list-style-type: none"> 1. Innovate based on needs. 2. Write and execute a business plan. 3. Pitch for a start up. 		
Course Outcomes		
At the end of the course the student will be able to: <ol style="list-style-type: none"> 1. Appreciate the community nature of many basic needs, user and market characteristics, delivery and scaling up considerations, and the role of partnerships and policies. 2. Understand the implications of different social, economic & cultural contexts for innovation and design of products, businesses and services 3. Familiarize with key concepts in design and innovation for impact, including various elements of the innovation cycle going all the way from need identification to deployment. 		
Course Content		
Module No.	Details	No of lectures
SECTION 1. - Innovation		
1	Understanding Innovation Curve Identifying opportunities for innovation	04
2	Understanding concepts – Prototyping, Minimum Viable Product (MVP), validating with early adopters Bring forth ideas to life using prototypes to test with real users and identify promising solutions to implement	06
SECTION 2. - Design Thinking		
3	Introduction to human-centered Design - Create innovative solutions to real-world challenges, Appreciating User Needs & Social Context Conduct user interviews and synthesize learning to uncover insights	04
4	Design thinking models; Integration of design and technology for impact perspective; Understanding minimum value proposition Case Studies Sanitation, Education, Health, Food, Insurance and finance technology	08
SECTION 3. - Entrepreneurship		
5	Immersive Learning Exercises for an entrepreneurial venture Concepts of ideation and experimentation, problem validation and	06

Sardar Patel College of Engineering, Andheri (West), Mumbai 400058
Year: 2021-22

	hypothesis testing, prototype creation and viability	
6	Quick Introduction to key concepts – Cost, Revenues, Profit, cash flow, funding/investments, Business Model types – B2C, B2B, B2B2BC, and importance of knowing what business you are in.	03
7	Writing a business plan; Making pitch to investors And Launching a start up	06

Disaster Management and Preparedness

Course Code	Course Name
OE-BTC713	Disaster Management And Preparedness
Course pre-requisites	Environmental Science (mandatory course), Surveying and Geomatics

Course Outcomes

- Upon successful completion of the course, students should be able
1. Understanding categories of disasters / hazards
 2. Analysing relationship between development and disasters
 3. Applying disaster/hazard management concepts and ideas and realization of the responsibilities to society
 4. Using various spatial tools and technologies for analysing the disaster/hazard
 5. Analysing methods to assess risk, vulnerability and exposure of each disaster / hazard

Course Content

Module No.	Details	Hrs.
1	<p>Introduction Concepts and definitions: disaster, hazard, vulnerability, risk, severity, frequency and details, capacity, impact, prevention, mitigation</p> <p>Disasters – Disasters classification; natural disasters (floods, drought, avalanches, cyclones, volcanoes, earthquakes, tsunamis, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, flash floods, cloud burst, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.); Disasters in global context, hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility, recent case studies</p>	08
2	<p>Disaster Impacts – Disaster impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.</p>	05
3	<p>Disaster Risk Reduction (DRR) – Disaster management cycle – its phases; prevention – significance of preventive action and measures, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Post disaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications);</p>	10

	Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.	
4	Disasters, Environment and Development – Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, land use changes, urbanization etc.) – case studies, sustainable and environmental friendly recovery; reconstruction and development methods.	08
5	Hazard, Vulnerability Risk Assessment (HVRA) Definitions; risk, hazard, vulnerability, severity, exposure, Rating scale or classification of levels of exposure, vulnerability, threat, hazard, Hazard probability, Risk calculation, Hazard mapping, Risk mapping - use of geoinformatics for HVRA	05

Engineering System and Development

Course Code	Course Name
OE-BTC714	Sectoral Engineering System and Development

Course pre-requisites

Course Objectives

Objectives of the course is:

- (i) to introduce the basic principles of engineering for a developing society,
- (ii) to develop an ability to formulate problem, analyze, solve and report to the stakeholders, and
- (iii) to practice the ability to design, conduct and report field-work in a particular discipline of engineering contributing to the development.

Course Outcomes

At the end of the course the student will be able to:

- (i) understand the basic principles of engineering for a developing society,
- (ii) formulate problem, analyze, solve and report to the stakeholders, and
- (iii) design, conduct and report field-work in engineering contributing to the development of the society.

Course Content

Module No.	Details	Hrs.
1	Module 1. Engineer and Society: Basics of Engineering Profession, engineering services, understanding the values of equity, efficiency and sustainability.	
2	Module 2. The Engineer as a change agent: Interdisciplinary, the need for design and synthesis	
3	Module 3. Development Indices: Human Development Index (HDI) and Organization for Economic Co-operation and Development (OECD) indices, The data needed to compute these, Core values of equity, efficiency and sustainability, Paradigms of development.	
4	Module 4: Role of Engineer as a change agent: Understanding Rural and Urban divide and its economy, Wholesale vs. Retail markets, the role of knowledge, practices, science and technology.	
5	Module 5: A Sectoral Engineering System. Example: Drinking water, Irrigation, Electricity, Diesel pumps, non-conventional energy, solar system, community services, water pipe networking, education, health services, road networking, road development, drainage system, energy audit, telecommunication, small scale	

	industries, agricultural sector, effect of seasonal variation on development, understanding service and manufacturing sector, understanding local and global scenario, any other as per engineering sector (Civil, Mechanical, Electrical, Computer, Agricultural, Health etc.)	
6	Module 6: Project through case studies (Rural/Urban): Framing the project, Understanding the demand, needs analysis, Studying the options available, measurement of social and economic parameters as inputs, The activities and the analysis, picking case-study, analyzing, solving and reporting solutions to the stakeholders.

VAC-BTC772	Environmental Impact Assessment and Management

Course pre-requisites	
------------------------------	--

Course Objectives		
The objectives of this course are		
<ol style="list-style-type: none"> 1. Enable graduates to identify attributes for EIA 2. Enable graduates to prepare EIA reports 3. Enable graduates to formulate Environmental Management Plans 		
Course Outcomes		
Upon successful completion of the course, students should be able		
<ol style="list-style-type: none"> 1. Identify environmental attributes for the EIA study 2. Identify methodology and prepare EIA reports 3. Specify methods for prediction of the impacts 4. Formulate environmental management plans 		
Course Content		
<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Introduction: The Need for EIA, Indian Policies Requiring EIA, The EIA Cycle and Procedures, Screening, Scoping, Baseline Data, Impact Prediction, Assessment of Alternatives, Delineation of Mitigation Measure and EIA Report, Public Hearing, Decision Making, Monitoring the Clearance Conditions, Components of EIA, Roles in the EIA Process. Government of India Ministry of Environment and Forest Notification (2000), List of projects requiring Environmental clearance, Application form, Composition of Expert Committee, Ecological sensitive places, International agreements.	04
2	Identifying The Key Issues: Key Elements of an Initial Project Description and Scoping, Project Location(s), Land Use Impacts, Consideration of Alternatives, Process selection: Construction Phase, Input Requirements, Wastes and Emissions, Air Emissions, Liquid Effluents, Solid Wastes, Risks to Environment and Human, Health, Socio-Economic Impacts, Ecological Impacts, Global	04

	Environmental Issues.	
3	EIA Methodologies: Criteria for the selection of EIA methodology, impact identification, impact measurement, impact interpretation & Evaluation, impact communication, Methods-Adhoc methods, Checklists methods, Matrices methods, Networks methods, Overlays methods, Environmental index using factor analysis, Cost/benefit analysis, Predictive or Simulation methods. Rapid assessment of Pollution sources method, predictive models for impact assessment, Applications for RS and GIS.	04
4	Reviewing The EIA Report: Scope, Baseline Conditions, Site and Process alternatives, Public hearing. Construction Stage Impacts, Project Resource Requirements and Related Impacts, Prediction of Environmental Media Quality, Socio-economic Impacts, Ecological Impacts, Occupational Health Impact, Major Hazard/ Risk Assessment, Impact on Transport System, Integrated Impact Assessment.	04
5	Review of EMP And Monitoring: Environmental Management Plan, Identification of Significant or Unacceptable Impacts Requiring Mitigation, Mitigation Plans and Relief & Rehabilitation, Stipulating the Conditions, what should be monitored? Monitoring Methods, who should monitor? Pre-Appraisal and Appraisal.	04
6	Case Studies: Preparation of EIA for developmental projects- Factors to be considered in making assessment decisions, Water Resources Project, Pharmaceutical industry, thermal plant, Nuclear fuel complex, Highway project, Sewage treatment plant, Municipal Solid waste processing plant, Tannery industry.	08
7	ISO 14001	02

Term Work

Term work shall comprise of

Report on assignments including problems based on the above syllabus shall be submitted as term work. One assignment on each module is to be submitted.

Audit will be granted on submitting the assignments and case studies

Conventional and Non-conventional materials in Highway subgrade

Course Code	Course Name
VAC-BTC773	Conventional and non conventional materials in Highway subgrade

Course pre-requisites	
------------------------------	--

Course Objectives

1. To Explain the Laboratory & Field Procedure for Testing of Subgrade,
2. To discuss use conventional & Nonconventional Materials in Subgrade.

Course Outcomes

Upon successful completion of this course, students will be able to :

1. Learn how to conduct static and cyclic triaxial test & how to use these data in pavement design. How to conduct static & cyclic plate bearing test, CBR test in field & lab.
2. Learn about different ground improvement technique, use of different stabilizers like, lime, fly ash, fibres in highway subgrade

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Subgrade: Functions, importance of subgrade soil properties on pavement performance, subgrade soil classification for highway engineering purpose soils as per PRA system, revised PRA system, Burmister system, Compaction System.	10
2	Test on subgrade soils: Static and cyclic triaxial test on subgrade soils, resilient deformation, Resilient strain, resilient modulus. CBR test, effect of lateral confinement on CBR and E – value of Subgrade soil. Static and cyclic plate load test, estimation of modulus of subgrade reaction, correction for plate size, correction for worst moisture content	06
3	Ground Improvement Technique: Different method of soil stabilization, use of geo- textile, geogrid and fibres, lime, fly ash in 3 highway subgrade. Vertical sand drain: design criteria, construction 08 and uses.	08

Text Books

1. Principles of Pavement Design, Second edition, 1975: Yoder, E. J., John Wiley & Sons, Inc., New

York.

2. Concrete Roads: HMSO, Road Research Laboratory, London.

3. Highway Engineering: Khanna & Justo, New Chand & Brothers, Roorkee. Principles and Practices of Highway Engineering: Dr. L. R. Kadiyali and Dr. N. B. Lal, Khanna Publication, New Delhi

SEM VIII

Engineering Economics Estimation & Costing

Course Code	Course Name
PC-BTC801	Engineering Economics Estimation & Costing
Course pre-requisites	ES-BTC304, ES-BTC355, PC-BTC307, PC- BTC405 to 407, PC-BTC501 to 506,PC-BTC 602,PC-BTC604

Course Outcomes
<p>Upon successful completion of the course, students should be able</p> <ol style="list-style-type: none"> 1. Have an idea of Economics in general, Economics of India particularly for public sector agencies and private sector businesses 2. Be able to perform and evaluate present worth, future worth and annual worth analyses on one of more economic alternatives. 3. Be able to carry out and evaluate benefit/cost, life cycle and breakeven analyses on one or more economic alternatives. 4. Be able to understand the technical specifications for various works to be performed for a project and how they impact the cost of a structure. 5. Be able to quantify the worth of a structure by evaluating quantities of constituents, derive their cost rates and build up the overall cost of the structure. 6. Be able to understand how competitive bidding works and how to submit a competitive bid proposal.

Course Content		
Module No.	Details	Hrs.
1	Basic Principles and Methodology of Economics. Demand/Supply – elasticity – Government Policies and Application. Theory of the Firm and Market Structure. Basic Macro-economic Concepts (including GDP/GNP/NI/Disposable Income) and Identities for both closed and open economies. Aggregate demand and Supply (IS/LM). Price Indices (WPI/CPI), Interest rates, Direct and Indirect Taxes Public Sector Economics –Welfare, Externalities, Labour Market. Components of Monetary and Financial System, Central Bank – Monetary Aggregates; Commercial Banks & their functions; Capital and Debt Markets. Monetary and Fiscal Policy Tools & their impact on the economy – Inflation and Phillips Curve.	06
2	Elements of Business/Managerial Economics and forms of organizations. Cost & Cost Control –Techniques, Types of Costs, Lifecycle costs, Budgets, Break even Analysis, Capital Budgeting, Application of Linear Programming. Investment Analysis – NPV, ROI, IRR, Payback Period, Depreciation, Time value of money (present and future worth of cash flows). Business Forecasting – Elementary techniques. Statements Cash flow, Financial. Case	06

	<p>Study Method.</p> <p>Indian economy - Brief overview of post-independence period – plans. Post reform Growth, Structure of productive activity. Issues of Inclusion – Sectors, States/Regions, Groups of people (M/F), Urbanization. Employment Informal, Organized, Unorganized, Public, Private. Challenges and Policy Debates in Monetary, Fiscal, Social, External sectors.</p> <p>Introduction to Acts pertaining to-Minimum wages, Workman's compensation (WC), Contracts, Arbitration, Easement rights</p> <p>Insurance requirements of a project - types of insurance policies, CAR policy, fire policy, professional indemnity, equipment insurance, WC policy</p>	
3	Concept of cash flow, working capital and its implications on the profit or loss while execution of the construction project.	03
4	Estimation / Measurements for various items- Introduction to the process of Estimation; Use of relevant Indian Standard Specifications for the same, taking out quantities from the given requirements of the work, comparison of different alternatives, Bar bending schedules, Mass haul Diagrams, Estimating Earthwork and Foundations, Estimating Concrete and Masonry, Finishes, Interiors, MEP works; BIM and quantity take-offs; adding equipment costs; labour costs; rate analysis; Material survey-Thumb rules for computation of materials requirement for different materials for buildings, percentage breakup of the cost, cost sensitive index, market survey of basic materials. Use of Computers in quantity surveying	10
5	Specifications-Types, requirements and importance, detailed specifications for buildings, roads, minor bridges and industrial structures	02
6	Rate analysis-Purpose, importance and necessity of the same, factors affecting, task work, daily output from different equipment/ productivity.	05
7	Tender- Preparation of tender documents, importance of inviting tenders, contract types, relative merits, prequalification. General and special conditions, termination of contracts, extra work and Changes, penalty and liquidated charges, Settlement of disputes, R.A. Bill & Final Bill, Payment of advance, insurance, claims, price variation, etc. Preparing Bids- Bid Price build up: Material, Labour, Equipment costs, Risks, Direct & Indirect Overheads, Profits; Bid conditions, alternative specifications; Alternative Bids. Bid process management	04

Term Work

Term work shall comprise of

The Laboratory work comprises of following Assignments:

1. Deriving an approximate estimate for a multi-storeyed building by approximate

methods.

2. Detailed estimate for the following with the required material survey for the same:
 - a. Ground plus three storied building with load-bearing walls
 - b. Ground plus three storied RCC Framed structure building
 - c. Bridge with minimum 2 spans
 - d. Factory building
 - e. Road work
 - f. Cross drainage work
 - g. Cost of finishes and MEP works for (a) and (b)
3. Preparation of bar bending schedule.
4. Drafting Specifications and Rate analysis
5. Preparation of valuation report in standard Government form.

2. V. Mote, S. Paul, G. Gupta (2004), Managerial Economics, Tata McGraw Hill
3. Pareek Saroj (2003), Textbook of Business Economics, Sunrise Publishers
4. M Chakravarty, Estimating, Costing Specifications & Valuation
5. Joy P K, Handbook of Construction Management, Macmillan
6. B.S. Patil, Building & Engineering Contracts
7. Relevant Indian Standard Specifications.
8. World Bank Approved Contract Documents.
9. FIDIC Contract Conditions.
10. Acts Related to Minimum Wages, Workmen's Compensation, Contract, and Arbitration
11. Typical PWD Rate Analysis documents.

Earthquake Engineering

Course Code	Course Name
PE-BTC821	Earthquake Engineering

Course pre-requisites	Engg. Mathematics II, Structural Dynamics
------------------------------	---

Course Objectives

The objectives of this course are

1. To develop civil engineering graduates having clear understanding of concept of dynamic loads, dynamic analysis, Seismic analysis of structures.
2. To apply the knowledge of structural dynamic to evaluate the seismic response of structures subjected to different ground motion. To apply response spectrum concept to characterize the ground motion.
3. To apply provisions of IS 1893-2016 & IS 13920-2016 to design seismic resistant structures.
4. To inculcate ethics to deal with social, environmental & economic issues.

Course Outcomes

Upon successful completion of the course, students should be able

1. Distinguish between static and dynamic loads; understand different types of dynamic loads, elements of single degrees of freedom system, concept of damping.
2. Carry out the dynamic analysis of various types of single and multiple degrees of freedom lumped mass structures (Damped and un-damped) for different types of dynamic loads including ground motion.
3. Describe earthquake phenomenon, their causes and effects on structures, understand ground motion characteristics and construct response spectrum for ground motions.
4. Evaluate the seismic response of various structures subjected to different ground motions including earthquakes.
5. Carry out Seismic analysis of structure, incorporating the provision of IS -1893-2016; and IS 13920- 2016

Course Content

Module No.	Details	Hrs.
1	Introduction: Introduction to structural dynamics, definition of basic problem in dynamics, static v/s dynamic loads, different types of dynamic	02

	loads.	
2	<p>Single degree of Freedom (SDOF) systems:</p> <p>Undamped vibration of SDOF system, natural frequency and period of vibration, damping in structures, viscous damping and Coulomb damping, effect of damping on frequency of vibration and amplitude of vibration, logarithmic decrement.</p> <p>Forced vibration, response to harmonic forces, periodic loading, dynamic load factors, response of structure subjected to general dynamic load, Duhamel's integral, numerical evaluation of dynamic response of SDOF systems subjected to different types of dynamic loads.</p> <p>Use of Fourier Series for periodic forces, introduction to vibration isolation.</p>	08
3	<p>MDOF systems:</p> <p>Direct determination of frequencies and mode shapes, orthogonality principle, approximate methods for determination of frequencies and mode shapes.</p> <p>Forced vibration of MDOF system, modal analysis, applications to beams and multistoried frames with rigid girders subject to lateral dynamic loads including ground motion.</p>	06
4	<p>Seismological background:</p> <p>Seismicity of a region, earthquake faults and waves, structure of earth, plate tectonics, elastic-rebound theory of earthquake, intensity and magnitude of earthquake, measurement of ground motion, seismogram, earthquake frequency, local site effects, seismotectonic and Seismicity of India. Effect of near-field and far-field earthquake ground motions.</p>	04
5	<p>Characterization of ground motion:</p> <p>Earthquake response spectra, factors influencing response spectra, design response spectra for elastic systems, peak ground acceleration, response spectrum shapes, deformation, pseudo-velocity, pseudo-acceleration response spectra, peak structural response from the response spectrum, response spectrum characteristics, construction site specific response spectra.</p>	05
6	<p>Deterministic earthquake response:</p> <p>Types of earthquake excitation, lumped SDOF elastic systems.</p>	04

1	T-I	1, 2
2	T-II	3, 4
3	End Sem	1 to 7

Bridge Engineering

Course Code	Course Name
PE-BTC822	Bridge Engineering

Course pre-requisites	Design of Prestressed concrete structures
------------------------------	---

Course Objectives

The objectives of this course are

1. To understand Bridge types
2. To learn IRC Loading criteria
3. To understand fundamentals of Bridge design
4. To understand fundamentals of Bridge design
5. To understand the principles of long span bridge design

Course Outcomes

Upon successful completion of the course, students should be able

1. Understand the different loadings on Bridges
2. Understand the components of different types of Bridges
3. Understand the behaviour and suitability of various bridge types
4. Design the various components of bridges

Course Content		
----------------	--	--

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	<p>Introduction:</p> <p>Classification and components of bridges, historical perspective, layout and planning, investigations for bridges, choice of type of the bridges, conceptual bridge design, bridge aesthetics. Bridge appurtenances.</p>	05
2	<p>Loads on bridges:</p> <p>Loading standards for highway and railway bridges (IRC, IRS)</p>	05
3	<p>Analysis and design of RC and PSC bridge decks:</p> <p>Slab culvert bridges, slab-and-beam bridges, load distribution in slabs and beams, bow-string girder bridges, behavior of skew bridge decks</p>	05
4	<p>Behavior, analysis and design of RC and PSC box-girder bridge decks.</p>	05
5	<p>Behavior, analysis and design of steel bridge decks: girder bridges, truss bridges, arch bridges, composite construction</p>	05
6	<p>Behavior, analysis and design of steel bridge decks: girder bridges, truss bridges, arch bridges, composite construction</p>	05

7	Modern methods of construction of concrete, steel and composite bridges, their impact on analysis and design, construction stage analysis. Introduction to analysis and design of long span bridges: suspension and cable stayed bridges, balanced cantilever construction, segmental construction.	06
---	--	----

Decision and Risk Analysis

Course Code	Course Name
PE-BTC823	Decision And Risk Analysis
Course pre-requisites	Probability and Statistics

Course Outcomes

- Upon successful completion of the course, students should be able
1. Describe and handle different risk and decision theoretic concepts and models
 2. Model and evaluate simple decision problems
 3. Handle problems with multiple criteria
 4. Elicit and handle model parameters

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Science of systems and concept of risk; introduction, systems engineering, concepts of risk assessment and management, applications to Civil Engineering Steps of risk characterization; hazard identification, exposure assessment, vulnerability analysis, risk mapping, example of risk characterization to natural hazards, risk assessment as a distributed process: example of Monte-Carlo techniques in human health and ecological risk assessments	10
2	Uncertainty analysis; introduction, uncertainty taxonomy, sensitivity analysis, probabilistic uncertainty, fuzzy systems, interval analysis, risk-based decision making	07
3	Risk filtering and ranking; introduction, past efforts in risk filtering, methodological framework of filtering and ranking, different ranking methods, case studies	07
4	Multi-objective trade-off analysis; introduction, examples of multiple environmental objectives, surrogate worth trade-off, characterizing a proper non-inferior solution	05
5	Decision-tree analysis; introduction, methodological approach, differences between single and multiple objective decision trees	07

Text Books

1. Robert T. Clemen: Making Hard Decisions: An Introduction to Decision Analysis (Upplaga: 2nd edition), Duxbury,
2. Vijay P. Singh, Sharad K. Jain, and Aditya Tyagi, : Risk and Reliability Analysis: A Handbook for Civil and Environmental Engineers, ASCE Press

Introduction to Offshore Engineering

Course Code	Course Name
PE-BTC831	Introduction to Offshore Engineering

Course pre-requisites

Course Objectives

- The objectives of this course are
1. to understand the complexities in offshore construction and obtaining resources from the ocean.
 2. to addresses the general engineering concepts that are fundamental to offshore engineering.
 3. to understand types of sites and platform structures, key engineering systems and ocean environmental monitoring

Course Outcomes

- Upon successful completion of the course, students should be able
1. to know various offshore construction methodologies
 2. to addresses the general engineering concepts during construction stages.
 3. to handle complexities and key engineering systems in ocean environment

Course Content		
----------------	--	--

Module No.	Details	Hrs.
1	Introduction: History and current state of the art of offshore structures, Definition of Offshore Structures, Met ocean Engineering: wind, wave and current loads on offshore structures	06
2	Environment & Construction: Offshore environment, Construction and launching, offshore project management,	05
3	Ocean construction: Types of Platforms: Jackets, TLPs, Semisubmersibles, Jack-ups, Concrete Gravity,deep water construction in ocean, offshore site investigations	05
4	Offshore Pipelines: Hydrostatic, hydrodynamic analysis and structural design	05
5	Buoys and Mooring systems: mooring configurations, advantages and disadvantages	05
6	Design criteria: Introduction to probabilistic design, extreme load & strength & fatigue, basics of anchoring and mooring system, riser system, Scaling laws & Model testing, Challenges in Deepwater testing: deepwater installations, constructions challenges.	05
7	Case studies in Offshore Engineering, Indian Ocean, Arabian Sea, bay of Bengal	05

Environmental Impact Assessment

Course Code	Course Name
PE-BTC841	Environmental Impact Assessment

Course pre-requisites	EE1, EEII
-----------------------	-----------

Course Objectives

The objectives of this course are

1. Enable graduates to identify attributes for EIA
2. Enable graduates to conduct EIA study
3. Enable graduates to formulate Environmental Management Plans.

Course Outcomes

Upon successful completion of the course, students should be able

1. Identify environmental attributes for the EIA study
2. Understand methodology and conduct EIA study
3. Specify methods for prediction of the impacts
4. Formulate environmental management plans.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Introduction: The Need for EIA, EIA notification and its emergence ; EIA notification 2006 and its subsequent amendments The EIA Cycle and Procedures, Screening, Scoping, Baseline Data, Impact Prediction, Assessment of Alternatives, Delineation of Mitigation Measure and EIA Report, Public Hearing, Decision Making, Monitoring the Clearance Conditions, Components of EIA, Roles in the List of projects requiring Environmental clearance, Application form, Composition of Expert Committee, Ecological sensitive places, International agreements. , Consent to establish and operate	6
2	Identifying The Key Issues: Key Elements of an Initial Project Description and Scoping, Project Location(s), Land Use Impacts, Consideration of Alternatives, Process selection: Construction Phase, Input Requirements, Wastes and Emissions, Air Emissions, Liquid Effluents, Solid Wastes, Risks to Environment and Human, Health, Socio-Economic Issues and Management, Ecological Impacts including biodiversity, Global Environmental Issues.	6
3	EIA Methodologies: EIA methodology (as per EIA 2006 notification_ impact identification, impact measurement, impact interpretation & Evaluation, impact communication, development of Leopold Matrix, predictive models for impact assessment, Applications for RS and GIS. Role of consultants, NABET, QCI	8
4	Reviewing Contents of EIA Report: Scope, Baseline Conditions,	6

	Site and Process alternatives, Public hearing. Construction Stage Impacts, Project Resource Requirements and Related Impacts, Prediction of Environmental Media Quality, Socio-economic Impacts, Ecological Impacts, Occupational Health Impact, Major Hazard/ Risk Assessment, Impact on Transport System, Integrated Impact Assessment.	
6	Case Studies: Preparation of EIA for developmental projects- Factors to be considered in making assessment decisions, Water Resources Project, Pharmaceutical industry, thermal plant,.	5
7	Case Studies :Nuclear fuel complex, Highway project, Sewage treatment plant, Municipal Solid waste processing plant, Tannery industry, Construction Projects	5

3	End Sem	1 to 6

Construction Productivity and Cost Analysis

Course Code	Course Name
PE-BTC851	Construction Productivity and Cost Analysis

Course pre-requisites	
------------------------------	--

Course Objectives

The objectives of this course are

1. To describe the Construction productivity
2. To understand basics of construction cost analysis
3. To summarize the students about various techniques of construction productivity and cost analysis.

Course Outcomes

Upon successful completion of the course, students should be able

1. Carry out construction labour and equipment productivity with help of various techniques.
2. Apply the statistical measurements for the analysis of construction cost.

Course Content		
----------------	--	--

Module No.	Details	Hrs.
1	Definition of Productivity, Impact of productivities on construction duration and costs; Measuring productivities of construction equipment, Staff and Labour and typical benchmarks for the same. Material logistics	06
2	Productivity analysis from Daily Progress Reports; Lean Construction concepts of Value Adding activities, Non-Value Adding Activities and Non-Value Adding but Necessary Activities; Productivity measurements by special Lean Construction-oriented field methods such as Work Sampling, Tact time analysis, Foreman Delay Surveys. Leads-Mass Haul Diagram	06
3	Productivity improvement measures such as Value Stream Mapping, Location-Based management Systems, 5S, good Housekeeping, etc.; use of specialist software for productivity studies.	06
4	Construction Cost Analysis: Introduction to the application of scientific principles to costs and estimates of costs in construction engineering; DSR and Market rates for cost analysis	06
5	Concepts and statistical measurements of the factors involved in direct costs, general overhead costs, cost mark-ups and profits	06
6	Fundamentals of cost recording for construction cost accounts and cost controls. Extension of EVM, Progress review & cost adjustment, Additional cost such as Contingencies, utilities, Land acquisition, Environment and forest clearance.	06

Text Books

1. Construction productivity A Practical Guide for Building and Electrical Contractors Edited by Eddy M. Rojas in Co-operation with ELECTRI International A Title in J. Ross Publishing's Strategic Issues in Construction Series.
2. Construction Productivity Management, Paul O. Olomalaiye, Ananda K.W. Jayawardane, Frank C. Harris, November 11, 1998, Prentice Hall.
3. Construction Management & PWD Accounts --- D Lal, S. K. Kataria & Sons, 2012
4. Construction Management and Accounts -- Singh H. Tata McGraw Hill, New Delhi, 1988
5. Construction Management: Planning and finance-- Cormican D. Construction press, London, Feb 2002.
6. Principles of Corporate Finance, Brealey R.A. Tata McGraw Hill, New Delhi, 2003.

1	T-I	1, 2
2	T-II	3, 4
3	End Sem	1 to 6

Contracts Management

Course Code	Course Name
PE-BTC852	Contracts Management

Course pre-requisites	
------------------------------	--

Course Objectives

The objectives of this course are

1. To describe the Overview of Contract Management
2. To understand Performance parameters; Delays, penalties in contract
3. To summarize the students about Contract Administration and Legal Aspects in Contract Management.

Course Outcomes

Upon successful completion of the course, students should be able

1. An idea of Management of Construction Contract
2. A basic ability to measures performance construction contract.
3. An idea how construction projects are administered with respect to contract structures and issues

Course Content		
----------------	--	--

Module No.	Details	Hrs.
1	Introduction, Importance of Contracts, Overview of Contract Management, Overview of Activities in Contract Management; Planning and People- Resource Management; Types of Contracts. EPC, BOT, BOOT, BOLT, HAM, DBFOT & PPP	06
2	Parties to a Contract; Common contract clauses, Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price.	06
3	Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations. Defect liability period. Construction Claims: Extra items and causes of claims. Types of construction claims, documentation. Settlement of claims, extension of time. Notices under contracts; Conventional and Alternative Dispute Resolution methods. Various Acts governing Contracts, Indian Contract Act (1872), Indian Arbitration and Conciliation Act 1996	06
4	Contract Administration, Payments; Contract Management in Various Situations- Contract Management in NCB Works, Contract Management in ICB Works Contracts, Contract of Supply of Goods- Design, Supply and Installation Contracts, FIDIC conditions,	06
5	Contract Management in Consultancy,; Managing Risks and	06

	Change; Contract Closure, Post-Implementation Review; Change of Scope of Contract	
6	Legal Aspects in Contract Management- Contract Management Legal View, Dispute Resolution, Arbitration , Integrity in Contract Management; Managing Performance- Introduction, Monitoring and Measurement Injunctions and Bailment.	06

Text Books

Conventional & Nonconventional Materials in Highway

Course Code	Course Name
PE-BTC861	Conventional & Nonconventional Materials in Highway

Course pre-requisites	
------------------------------	--

Course Objectives

The objectives of this course are

1. To Explain the Laboratory & Field Procedure for Testing of Sub grade,
2. To discuss use conventional & Nonconventional Materials in Sub grade.

Course Outcomes

Upon successful completion of the course, students should be able

1. Learn how to conduct static and cyclic triaxial test & how to use these data in pavement design. How to conduct static & cyclic plate bearing test, CBR test in field & lab.
2. Learn about different ground improvement technique, use of different stabilizers like, lime, fly ash, fibers in highway sub grade

Course Content

Module No.	Details	Hrs.
1	Subgrade: Functions, importance of subgrade soil properties on pavement performance, subgrade soil classification for highway engineering purpose soils as per PRA system, revised PRA system, Burmister system, Compaction System.	10
2	Test on subgrade soils: Static and cyclic triaxial test on subgrade soils, resilient deformation, Resilient strain, resilient modulus. CBR test, effect of lateral confinement on CBR and E – value of Subgrade soil. Static and cyclic plate load test, estimation of modulus of subgrade reaction, correction for plate size, correction for worst moisture	06

	content.	
3	Ground Improvement Technique: Different method of soil stabilization, use of geo- textile, geogrid and fibres, lime, fly ash in highway subgrade. Vertical sand drain: design criteria, construction and uses.	08

Text Books

1. Principles of Pavement Design, Second edition, 1975: Yoder, E. J., John Wiley & Sons, Inc., New York.
 2. Concrete Roads: HMSO, Road Research Laboratory, London.
 3. Highway Engineering: Khanna & Justo, New Chand & Brothers, Roorkee.
- Principles and Practices of Highway Engineering: Dr. L. R. Kadiyali and Dr. N. B. Lal, Khanna Publication, New Delhi

Soil Dynamics

Course Code	Course Name
PE-BTC862	Soil Dynamics

Course pre-requisites	Engineering Mechanics, Soil Mechanics
-----------------------	---------------------------------------

Course Objectives

Soil dynamics is a branch of soil mechanics that deals with behaviour of soil and foundations under dynamic loading. Operation of rotary machines or hammers, and earthquake ground motions are examples of dynamic loads that challenge engineers in their design of different foundations.

The objectives of this course are

1. To explain the basics of a vibrating system, degrees of freedom, and wave propagation in soil
2. To evaluate liquefaction potential, and to understand dynamic earth pressure on retaining walls
3. To explain the principles of machine foundation design, vibration isolation and screening methods
4. To recommend field and laboratory tests to determine dynamic properties of soil

Course Outcomes

Upon successful completion of the course, the learners should be able to

1. Apply the basics of dynamics to soil
2. Predict dynamic behaviour of soils,
3. Assess the effects of dynamic loads on behaviour of soil/rock
4. Design machine foundations and other soil systems subjected to dynamic loading

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Vibration of elementary system, Degree of freedom, Analysis of system with one degree of freedom , Spring- mass system, Harmonic vibration, uniform circular motion, natural frequency, free and forced vibrations with and without damping. Types of damping. Importance of resonance	08
2	Wave propagation in elastic rods, in an elastic infinite medium, and in elastic half space, wave generated by surface footing.	04

3	Liquefaction of soils , criterion and factors affecting liquefaction of soil, laboratory and field studies on liquefaction, evaluation of liquefaction potentials, liquefaction of clay	08
4	Field and laboratory tests for evaluation of dynamic properties of soil under vertical vibration coefficient of elastic uniform compression, coefficient of elastic uniform shear, spring constant damping modulus of elasticity typical values of soils	05
5	Principles of machine foundation design, criteria for satisfactory machine foundation, degree of freedom of a block foundation analysis of vertical and sliding vibration of a machine foundation, mass of soil participating in vibration	05
6	Vibration isolation and screening methods, improvement of distressed machine foundation.	03
7	Basics of pseudo-static earth pressure on retaining walls: distribution of pressure, point of application of the resultant. Introduction to pseudo-dynamic and modified pseudo-dynamic theories	03

Term Work

Term work shall comprise of

1. Examination (MCQ) based on above topics
2. Site visit for better understanding various aspects of foundation engineering
3. Course project*

***Course Project:** There will be a course project where the students will be able to apply and integrate the knowledge gained during the course. The projects will be developed by teams of two to four students.

Finite Element Analysis

Course Code	Course Name
PE-BTC824	Finite Element Analysis
Course pre-requisites	Advanced Solid Mechanics

Course Objectives		
<p>The objectives of this course are</p> <ol style="list-style-type: none"> 1. To understand mathematical modelling and numerical formulation of engineering problems. 2. To learn about concepts of elements and their properties. 3. To understand finite element methods and its application for solution of structural mechanics problems. 		
Course Outcomes		
<p>Upon successful completion of the course, students should be able</p> <ol style="list-style-type: none"> 1. Formulate the numerical models for engineering problems. 2. Use appropriate element for solution of problem by finite element modeling. 		
Course Content		
Module No.	Details	Hrs.
1	<p>Introduction Mathematical Modeling of Engineering Problems, Types of governing equations, Solution methodologies, numerical modeling, approximate method of analysis – method of point collocation, method of collocation by sub region, method of least squares, Galerkin’s method, Rayleigh-Ritz method</p>	05
2	<p>Finite Element Method: General Steps in FEM, Direct approach, variational approach, energy approach and weighted residual approach.</p>	06
3	<p>Finite Elements and Interpolation Functions: Interpolation functions, one two and three dimensional elements – linear, quadratic, Cubic and Lagrangian Interpolation function, Isoparametric elements, Serendipity elements Shape Functions, Sub-Parametric and super parametric elements, Infinite elements</p>	06
4	<p>One Dimensional Finite Elements: Linear spring, Truss element, Space truss, Beam Element. Application to analysis of beams, trusses, plane frames and grids</p>	04

	Multilinear springs, compression and tension only springs.	
5	Two Dimensional Finite Elements: Two dimensional stress analysis, CST element for plane stress and plane strain, triangular elements for axi-symmetric analysis, rectangular elements, isoparametric formulation	05
6	Introduction to Non-Linear Analysis: Geometric Non-Linearity-Geometric Stiffness of an Axial Element. Stability of Bar- Spring System. General Formulation of Geometrically Non Linear Problem. Geometric Stiffness of Beam-Column and Triangular Elements. Non-Linear Material Behavior. Non- Linear Spring- Elasto Plastic Analysis by FEM- Elasto Plastic Analysis of a truss- Two Dimensional Element Formulations- General Formulation of a physically Non-Linear Problem	05
7	Introduction to Dynamic Analysis by FEM: Formulation of Inertial Properties- Lumped Mass vs Consistent Mass Matrices –Condensation and Assembly of Mass Matrices- Formulation of Damping Properties- Free Vibration, Steady – State and Transient Response Analysis for Simple Problems.	05

Advanced Structural Mechanics

Course Code	Course Name
PE-BTC825	Advanced Structural Mechanics

Course pre-requisites	Mechanics of Materials, Structural Mechanics
------------------------------	--

Course Objectives

The main objectives of the course:

1. To Introduce the advanced topics of structural mechanics

Course Outcomes

At the end of the course the students shall be able to:

1. Determine Shear Centre of thin walled open sections and analyse beams/members with large initial curvature
2. Analyse beams on elastic foundation and beams curved in plan
3. Use suitable failure theory to find the failure stress

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Shear Centre for symmetrical and non-symmetrical (about both axis) thin walled open sections, Introduction to thin walled beam theory	06
2	Bending of beams with large initial curvature loaded in their plane of curvature. Application to analysis of hooks, circular closed rings, chain links with straight length and semi-circular ends.	06
3	Beams on elastic foundation: Analysis of beams of infinite length subjected to concentrated force/moment and semi-infinite length subjected to concentrated load/moment at one end. Semi-infinite beam hinged at one end (origin)& subjected to UDL throughout.	06
4	Beams curved in plan: Analysis of beams loaded perpendicular to their own plane, simply supported, fixed and continuous beams.	06
5	Theories of Failure: Maximum principal stress theory, Maximum principal strain theory, Maximum shear stress theory, maximum total strain energy theory.	04

Water Resources Economics Planning and Management

Course Code	Course Name	
PE-BTC832	Water Resources Economics Planning and Management	
Course pre-requisites		
Course Objectives		
The main objectives of the course are		
<ol style="list-style-type: none"> 1. To study the water resources planning processes 2. To acquire the knowledge of system approach and decision making 3. To understand discounting techniques in water resources engineering 		
Course Outcomes		
At the end of the course the students shall be able to		
<ol style="list-style-type: none"> 1. Demonstrate the water resources planning processes 2. Apply the knowledge of system approach during project selection 3. Apply discounting techniques in WRE. 		
Course Content		
<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Planning and decision making process: Importance and necessity of planning, Decision making process and types	04
2	Systems Approach To Water Resource Planning: Water as economic commodity, Principles of economics	04
3	Discounting techniques: Price theory, Resource allocation, project optimality conditions. Cost benefits studies, Role of benefit cost parameters in project selection. Economic feasibility tests.	06
4	Decision making under uncertainty and risk. Cost benefit studies of single & multipurpose projects. Economic planning, capacity expansion.	06
5	Multi objective planning: Methods of analysis. Stakeholders' participation, Preparation of feasibility report, interstate water disputes,	06
6	International development on water transfer. Concept of IWRM. Importance and necessity.	05
7	Case studies: various case studies in Indian Context, Economics and its applications to WRE	05

Environmental Law and Policy

Course Code	Course Name
PE-BTC842	Environmental Law and Policy

Course pre-requisites	EEl, EEII, EVS
-----------------------	----------------

Course Objectives

The objectives of this course are

1. Learn about the significance of developments in international environmental law and the fundamental principles that have emerged.
2. Expose about the human right to environment and constitutional framework governing environment in select countries, including India
3. Understand judicial response to environmental issues in India

Course Outcomes

Upon successful completion of the course, students should be able

1. Comprehend the statutory and regulatory mechanisms pertaining to environment in India and abroad
2. Know about importance of public participation through Right to information, Public Interest Litigation and other remedies in preserving and protecting environment
3. Understand the emerging environmental issues as ozone depletion, climate change, energy crisis, nuclear issues, waste accumulation, marine ecology etc. and the viability of posited solutions
4. Understand the judicial response.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Introduction Principles of Environmental Law and international environmental law Human rights to environment and constitution of the world Sources of Environmental Law	03
2	Law relating to Water pollution, Regulation of wetlands, Dams and the environment, Coastal regulation laws in India, High seas and outer space, Law relating to Air pollution, Ozone depletion, Climate change law, Law relating to Waste management, Law relating to Plastic and bio- medical waste management, Industrial disasters and the environment, Disaster management and environment, Chemicals and impact on environment	07
4	Regulation of Mining sector in India, Forest conservation laws in India, Wildlife protection	04
5	Biodiversity, Access and benefit sharing, Bio safety and legal issues, Procedural environmental rights, Role of NGO in environmental protection	04

6	Judicial remedies in environmental cases, Responsibility and Liability for environmental harm	04
7	Nuclear energy and law, Armed conflict and the environment, Regional environmental Cooperative framework	04

Reference Books

1. Environmental Law in India: P Leelakrishnan
2. Environmental Law and Policy in India: Shyam Divan: Armin Rosencranz

Valuation and Value Engineering

Course Code	Course Name
PE-BTC853	Valuation and Value Engineering

Course pre-requisites

Course Objectives

The objectives of this course are

1. To describe concept and importance of Value analysis and management.
2. To valuation and different methods of valuation.
3. To summarize life cycle costing for the construction project.

Course Outcomes

Upon successful completion of the course, students should be able

1. Demonstrate their capability for Value analysis and management.
2. To carry out valuation of building and other structures
3. Use of Life cycle costing for the construction project.

Course Content

Module No.	Details	Hrs.
1	Valuation: Purpose of valuation. Meaning of price, cost and value. Factors affecting 'value'. Types of value: only Fair Market Value, Book Value, Salvage/ Scrap Value, Distressed Value and Sentimental Value. Concept of free hold and lease hold property. Estimation versus valuation. Meanings of depreciation & obsolescence	05
2	Different methods of valuation for different types of assets such as land and building, horticulture, historical places.	05
3	Value : Meaning of value, basic and secondary functions, factor contributing to value such as aesthetic, ergonomic, technical, economic : identifying reasons or unnecessary costs :	04
4	Value Analysis: value analysis team; principles of value analysis, elements of a job plan viz. orientation, Information, presentation. Implementation, follow up action, benefits of value analysis, various applications; assessing effectiveness of value analysis. Value management in the building and other construction works	05
5	Life cycle costing – Forecasting of Capital as well as operating & maintenance costs, time value, present worth analysis, DCF methods, ROR analysis,	05
6	Valuation Report: Valuation Report, contents, standard formats, Case study of any one Report	04

Transportation Planning and Economics

Course Code	Course Name
PEC-BTC863	Transportation Planning and Economics

Course pre-requisites

Course Objectives		
The objectives of this course are		
<ol style="list-style-type: none">1. To develop skill for four stages modelling and traffic forecasting in transportation planning including the impacts due to land use changes.2. To impart the knowledge of economic assessment so as to enable students to decide worthiness of any infrastructure project.3. To make students aware of effectiveness of public transport systems with their suitability and role in developing countries like India.4. Create awareness about modern computation techniques for transportation planning, modelling and analysis.		
Course Outcomes		
Upon successful completion of the course, students should be able		
To understand travel behaviour, forecast trips and assess the travel pattern for future infrastructural facilities. They should be able to justify provision of infrastructural facility based on economic assessment and should be able to decide suitability of a particular mass transport system		
Course Content		
Module No.	Details	Hrs.
1	Transportation Planning and management: General Travel Forecasting Principles and techniques, Generalized demand, price and capacity relationship applied to travel forecasting, Practical problems of forecasting travel. Introduction to the process of urban transport planning.	06
2	Travel demand forecasting: Trip generation analysis, trip classification, multiple regression analysis, category analysis, trip distribution analysis: introduction, methods of trip distribution,	06

	uniform and average factor method, Frater method, Furness method, the gravity model and its calibration, Intervening and competing opportunities model, linear programming approach to trip distribution. Modal split analysis: introduction, Modal split analysis: Probit analysis, Logit analysis and Discriminant analysis, modal split models with behavioral basis. Traffic Assignment: purpose of traffic assignment, traffic flow characteristics, Assignment techniques: All or nothing assignment, Multiple route assignment, Capacity restraint assignment, Diversion curves. Rout building algorithms.	
3	Land-use transport models: Introduction, selection of Land-use transport models, The Lowry model, Grain – Lowry model, Applications of Lowry model.	04
4	Introduction to advanced/soft computational techniques for transportation planning like Expert Systems, Neural Networks, Fuzzy Logic, Genetic Algorithm, Simulated Annealing, Hybrid systems etc.	06
5	Transport Economics: Economic evaluation of highway schemes, need for economic evaluation, cost and benefits of transportation projects, basic principles of economic evaluation, Net present value method, benefit/cost ratio method, internal rate of return method. Vehicle operating costs, Value of travel time saving, Accident costs and road pricing.	04
6	Public Transportation Introduction to various mass transportation systems, Classification of mass transit modes: Street transit or surface transit, Semi rapid transit, Rapid transit or mass rapid transit System, Special transit systems: magnetic levitation, monorails, water borne transport, Automated Guided Transit, Detailed capacity assessment of some selected technologies: Conventional bus on bus bays, Light rail transit, Rail Rapid Transit, Regional rail Transit or Suburban Railway, Suitability of Transit Systems for different travel demand for Indian Cities,	06
7	Suitability of Transit Systems for Indian Cities of Different Population sizes and forms, Influence of other factors in selection of Mass Transit Systems, Transit System Operations: Introduction, Route Development, stop location and stopping policy, Schedule development, Capacity of transit systems. Future of Public	04

	transportation.	
Term Work		
Term work shall comprise of		
Mini Project work based on transportation planning or on Public transportation system / Application of transport planning or transport economics software, assignment consisting of at least 15 problems.		

Text Books
<ol style="list-style-type: none">1. Traffic Engineering and Transport Planning: L.R. Kadiyali, Khanna publishers Delhi2. Principles of Traffic Engineering: G.J. Pingnataro, Mc Graw-Hill, 1970.3. Mechanics of Water Waves

Course Code	Course Name
OE-BTC811	Mechanics of Water Waves

Course pre-requisites	
------------------------------	--

Course Objectives

The main objectives of the course are

1. To develop an understanding of basic concepts in coastal engineering
2. To help the student develop design concepts in coastal engineering
3. To discuss basic principles of water wave mechanics regarding wave energy and momentum

Course Outcomes

Upon successful completion of the course, students should be able

1. Basic concepts in coastal engineering and construction environment
2. Design concepts in coastal engineering
3. Basic principles of water wave mechanics in analyzing ocean and coastal structures and environment

Course Content

Module No.	Details	Hrs.
1	Phenomena, Definitions and Symbols: Wave Classification, Description of Waves, Definitions and Symbols	04
2	Governing Equations and Boundary Conditions: Bottom Boundary Layer, Governing Hydrodynamic Equations, Boundary Conditions, Kinematic Boundary Condition at Bottom, Boundary Conditions at the Free Surface, Boundary Condition Reflecting Constant Wave Form (Periodicity Condition), Summary of Mathematical Problem	06
3	Wave Theory: Linear or Airy's (or sinusoidal or small amplitude) wave theory, Non-linear (or finite amplitude) wave theories.	05
4	Random Waves: Basic definitions in random data analysis, Wave Spectrum Analysis, Short term and long term Wave Statistics,	05
5	Wave propagation: Wave Shoaling, Wave Refraction, Wave Diffraction, Wave Reflection, Effect of Currents, Wave Breaking, Wave Set up and Set down, Wave Runup, Design water depth.	05
6	Wave Forces: Wave forces on Shore-Based Structures, wave forces on small diameter and large diameter members, wave forces on entire structures, Spectral and Statistical Analysis of Wave Forces	05
7	Various case studies in ocean and coastal engineering	06

Human Resources Development and Organizational Behavior

Course Code	Course Name
OE-BTC812	Human Resources Development and Organizational behavior

Course pre-requisites	
------------------------------	--

Course Objectives

The students will learn about :

1. to develop a systematic and planned approach through which the efficiency of employees is improved.
2. Development of the integrated use of training, organization, and career development efforts to improve individual, group, and organizational effectiveness.
3. To understand the key competencies that enable individuals in organizations to perform current and future jobs through planned learning.

Course Outcomes

The students will be able to:

1. To set the future goals and objectives for the entire organization and for self.
2. To apply integrated use of training, organization, and career development efforts
3. To understand the importance of key competencies that enable individuals in organizations to grow.

Course Content

Module No.	Details	Hrs.
1	Introduction to Human Resource Development: Emergent of HRD, Critical roles, challenges, HRD Process Model: identification of needs and Design and development of HRD programs, Process Model: Methods of Implantation, Evaluation of programs.	05
2	HRD interventions: Mentoring for employee development: Role of mentoring in development, Employee counseling for HRD: Overview of counseling programs, employee assistance program, stress management, employee wellness and health promotion, Competency framework of HRD: steps in competency mapping.	06
3	Career Planning, management, and development: Career development stages and activities, role of individual and organization in career planning, Organizational Learning, and learning organizations.	05
4	The future of HRD and Ethics: Research, practice and education of HRD for innovation and talent development and management, Role of HRD in developing ethical attitude and behavior and development, Ethical problems with HRD roles.	05
5	Organizational Behavior: Introduction, What is organizational Behavior? Diversity in	05

	Organizations, Attitudes and Job Satisfaction, Emotions and Moods, Personality and Values, Perception and Individual Decision Making, Motivation Concepts.	
6	Foundations of Group Behavior: Understanding Team work, Communication, Leadership, Power and Politics, Conflict and Negotiation, Foundations of Organization Structure, Organizational Culture, Human Resource Policies and Practices, Organizational Change and Stress Management.	05
7	Case Studies: Based on survey done with various industries.	05

Watershed Development and Management

Course Code	Course Name
OE-BTC 813	Watershed Development and Management

Course pre-requisites

Course Objectives

The main objectives of the course are

1. To explain the concept of watershed and its management.
2. To study watershed hydrology and its behavior.
3. To describe erosion process.

To summarize the engineering measures for soil and water conservation

Course Outcomes

At the end of the course the students shall be able to

1. Apply the engineering measures for soil and water conservation
2. Develop watershed management plan

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Components of watershed and need of watershed management; Principal factors influencing watershed operations; Delineation of watersheds; Engineering surveys; Data requirement	04
2	Watershed hydrology, water resources assessment in watershed, hydrological cycle; Surface water assessment-rainfall-runoff analysis; Groundwater assessment, infiltration and its measurement	04
3	Watershed Behavior- Physical elements of watershed, effects of land use changes on hydrological cycle components, watershed experiments, Land capability classification; Erosion process- factors affecting erosion, types of erosion, soil erosion models	06
4	Engineering measures for soil and water conservation- Contour bunding, graded bunding, bench terracing, land leveling and grading; Small storage structures- Types and design data requirement, loose boulder dams, gabions, check dams and their design criteria	06
5	Rainwater harvesting, direct and indirect methods, filter design, planning and design; Layout and execution; Impact assessment, operation and maintenance issues	06
6	Watershed management plan- Methodology of planning a watershed, identification of watershed problems, socio-economic issues.	06
7	Case studies: Application of Remote sensing and GIS in watershed management	04

Sr. No.	Examination	Module
1	T-I	1, 2
2	T-II	3, 4
3	End Sem	1 to 7

Disaster Management and Preparedness

Course Code	Course Name
OE-BTC814	Disaster Management And Preparedness
Course pre-requisites	Environmental Science (mandatory course), Surveying and Geomatics

Course Outcomes

Upon successful completion of the course, students should be able

1. Understanding categories of disasters / hazards
2. Analysing relationship between development and disasters
3. Applying disaster/hazard management concepts and ideas and realization of the responsibilities to society
4. Using various spatial tools and technologies for analysing the disaster/hazard
5. Analysing methods to assess risk, vulnerability and exposure of each disaster / hazard

Course Content

Module No.	Details	Hrs.
1	<p>Introduction Concepts and definitions: disaster, hazard, vulnerability, risk, severity, frequency and details, capacity, impact, prevention, mitigation</p> <p>Disasters – Disasters classification; natural disasters (floods, drought, avalanches, cyclones, volcanoes, earthquakes, tsunamis, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, flash floods, cloud burst, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.); Disasters in global context, hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility, recent case studies</p>	08
2	<p>Disaster Impacts – Disaster impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.</p>	05
3	<p>Disaster Risk Reduction (DRR) – Disaster management cycle – its phases; prevention – significance of preventive action and measures, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Post disaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications);</p>	10

	Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.	
4	Disasters, Environment and Development – Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, land use changes, urbanization etc.) – case studies, sustainable and environmental friendly recovery; reconstruction and development methods.	08
5	Hazard, Vulnerability Risk Assessment (HVRA) Definitions; risk, hazard, vulnerability, severity, exposure, Rating scale or classification of levels of exposure, vulnerability, threat, hazard, Hazard probability, Risk calculation, Hazard mapping, Risk mapping - use of geoinformatics for HVRA	05

Low Cost Roads (Rural Roads)

Course Code	Course Name
VA-BTC873	Low Cost Roads (Rural Roads)

Course pre-requisites	
------------------------------	--

Course Objectives

1. To acquire the knowledge about the selection of materials for construction and maintenance of Rural Roads.
2. To discuss the Geometric standard of rural roads and utilize the knowledge for implementation.
3. To identify and Implement the suitable technique for construction of rural roads

Course Outcomes

1. To produce the knowledge for deciding the geometric standards for rural roads.
2. To acquire the knowledge about the selection of materials for construction and maintenance of Rural Roads.
3. To identify and Implement the suitable technique for construction of rural roads.

Course Content

<i>Module No.</i>	<i>Details</i>	<i>Hrs.</i>
1	Rural Road Planning: classification of low cost roads, reason of low connectivity, Road alignments survey, factor affecting alignments, collection of data, preparation of project reports and drawing, PMGSY Approach for priority of construction and upgradation of roads	06
2	Geometric Design standards: Classification of rural roads, design speed, cross sectional elements, sight distance, horizontal and vertical curve, super elevation, extra widening, gradients	06
3	Pavement Materials subgrade soil classification for highway engineering purpose soils as per PRA system, revised PRA system, Grading requirements for aggregate, Grading of aggregate for WBM type bases and subbase construction, material selection for Bituminous Course of Rural Roads. Suitability of aggregate and binding material for construction of rural roads. CBR test, triaxial test on subgrade soils, plate bearing test, modulus of subgrade reaction, E – Value of subgrase soils	05
4	Design and construction of Rural Roads: Flexible pavement, semi rigid pavements, roller compacted concrete pavements; equipment's used	06

Sardar Patel College of Engineering, Andheri (West), Mumbai 400058
Year: 2021-22

	during construction of roads	
5	Use of waste materials: Different methods of stabilization, use of fly ash in embankment and subgrade, construction of lime – fly ash – soil, construction of Lime – Fly ash bound macadam, lime fly ash concrete, roller compacted concrete pavement, dry lean concrete for base course. Use of other waste materials like rice husk ash, recycled concrete, iron and steel slag, natural and synthetic fibers, geotextile and geogrids	06
6	Maintenance of Rural roads: Distresses in flexible, rigid and semi-rigid pavements, routine maintenance, periodic maintenance, maintenance of earth road, gravel roads, WBM type roads, Bituminous macadam types roads etc.	04
7	Quality Control: Quality control test prior to construction and during construction on different pavement layer materials and pavement layers. frequency of tests,	04
