

**Bharatiya Vidya Bhavan's**

**SARDAR PATEL COLLEGE OF ENGINEERING**

Government Aided Autonomous Institute under Mumbai University  
Andheri (W), Mumbai - 400058

## **COURSE CONTENTS**

### **FIRST YEAR MECHANICAL ENGINEERING**

#### **SEMESTER –I & II**

Academic Year: 2023-24

Regulation 23

## LIST OF COURSES

|                                                              |    |
|--------------------------------------------------------------|----|
| BS-BTM 101: Differential Calculus & Complex Numbers.....     | 3  |
| BS BTM102: Engineering Physics .....                         | 5  |
| ES-BTM101: Engineering Graphics .....                        | 7  |
| ES-BTM102: Engineering Mechanics .....                       | 9  |
| BS-BTM103: Biology for Engineers .....                       | 11 |
| BS-BTM151: Engineering Physics Laboratory .....              | 13 |
| ES-BTM152: Engineering Mechanics Laboratory .....            | 14 |
| SE-BTM101: Design Thinking and Innovations .....             | 15 |
| VE-BTM101: Workshop Practice.....                            | 17 |
| VE-BTM101: Ethics, Values and Life skills .....              | 19 |
| CC-BTM101: Co curricular course (Yoga) .....                 | 21 |
| BS-BTM201: Integral Calculus and Differential Equations..... | 23 |
| BS-BTM202: Engineering Chemistry .....                       | 26 |
| ES-BTM201: Basic Electrical Engineering .....                | 28 |
| PC-BTM201: Manufacturing Processes .....                     | 30 |
| BS-BTM251: Engineering Chemistry Laboratory.....             | 33 |
| ES-BTM251: Basic Electrical Engineering Lab.....             | 34 |
| SE-BTM201: Programming for Problem solving.....              | 35 |
| VS-BTM202: Mechanical Workshop .....                         | 38 |
| AE-BTM201: Communication Skills .....                        | 40 |
| IK-BTM201: Indian Traditional Knowledge.....                 | 44 |
| CC-BTM 201: Co curricular Activity .....                     | 46 |

## BS-BTM 101: Differential Calculus & Complex Numbers

| Course Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                            | Course Name                                      |

    |   | well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| 3 | <b>Electromagnetism and Electromagnetic Waves</b><br>Concept of gradient, divergence and curl. Fundamental theorems: of calculus, for gradients, for divergences and for curls.<br>Coulomb's law, Gauss' law, divergence and curl of electrostatic fields, introduction to scalar potential, relation of potential with field.<br>Divergence and curl of B, BiotSavart law, magnetic vector potential.<br>Comparison of Electrostatics and Magnetostatics.<br>Electrodynamics before Maxwell, Maxwell's equations, Maxwell's equations in matter. | 8 |
| 4 | <b>Band structure in solids:</b><br>Band formation in solids and classification based on band theory. Fermi-Dirac statistics, concept of Fermi level and its variation with temperature and impurity in semiconductors. Carrier concentrations: intrinsic and extrinsic, carrier drift mobility, resistivity and Hall effect.                                                                                                                                                                                                                     | 5 |
| 5 | <b>Fiber Optics Communication and LASER:</b><br>Optical fiber: Propagation of light in an optical fiber- TIR, Angle of Acceptance; Numerical Aperture; Types of Optical Fibers; Advantages of Optical Fiber, Applications.<br>LASER: Absorption, spontaneous and stimulated emission, Einstein's coefficients. Terms Associated with Lasers: population inversion, metastable state, pumping and pumping schemes, active medium, and resonant cavity. Ruby laser, He-Ne Laser, Nd:YAG laser. Applications.                                        | 5 |

| Prerequisites                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | NA                    |
| Course Objectives                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                       |
| <p>The objectives of the course are</p> <ol style="list-style-type: none"> <li>1. To familiarize the students with the basic biological concepts and their engineering applications.</li> <li>2. To enable the students with an understanding of biodesign principles to create novel devices and structures.</li> <li>3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.</li> <li>4. To motivate the students to develop the interdisciplinary vision of biological engineering.</li> </ol> |                       |

| Course Outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>At the end of the course the student will be able to:</p> <ol style="list-style-type: none"> <li>1. Understand basic biological concepts required to engineer application related to problems associated in biology</li> <li>2. Evaluate the principles of design and development, for exploring novel bioengineering projects.</li> <li>3. Corroborate the concepts of biomimetics for specific requirements.</li> <li>4. Think critically towards exploring innovative biobased solutions for socially relevant problems.</li> </ol> |

### Detailed Syllabus

| Module | Topics                                                                                                                                                                                                                                                                                                                                        | Hours |

| The objectives of this course is:<br>1. To introduce the students to the experimental methods to verify the principles and methods of statics (mechanics).                                                                                                                                                                                                                                   |
| Course Outcomes                                                                                                                                                                                                                                                                                                                                                                              |
| Upon successful completion of the course, students shall be able to:<br>1. Experimentally verify the principles of statics (mechanics).                                                                                                                                                                                                                                                      |
| List of Experiments                                                                                                                                                                                                                                                                                                                                                                          |
| 1. To verify polygon law of forces (Concurrent force system)<br>2. To verify Lami's theorem using simple jib crane<br>3. Equilibrium of non-concurrent non parallel force system<br>4. To verify moment equilibrium condition using bell crank lever<br>5. To determine coefficient of friction using friction plane<br>6. To determine coefficient of friction using angle of repose method |

## SE-BTM101: Design Thinking and Innovations

| Course Code                                                                                                                                                                                                                                                                                                                                                                                                                          | Course Name                           |

| Course Objectives                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| The main objectives of the course are                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| 1. Introduce Ordinary Differential Equations of First Order and Higher Order with constant coefficients.               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| 2. Introduce Double and Triple Integrals.                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| 3. Apply Double and Triple Integrals to find area, mass and volume.                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| Course Outcomes                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| At the end of the course the students shall be able to                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| 1. Apply the knowledge of first order and higher ordinary differential equation in different engineering applications. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| 2. Set up and evaluate multiple integrals for regions in the plane.                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| 3. Find Area of the region bounded by curves and to find volume and Mass of solid geometric figures.                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |

**Term work:**

1. One assignment on each module of the syllabus.
2. Industrial visit report (format should be provided by teacher)
3. Seminar presentation on the topic related to any one of the topics [Desirable: inclusion of video of the manufacturing process of any product]
4. Tutorial in every instructional week.
5. One Guest lecture by industry expert

**Text Books:**

1. S. Kalpakjian & S.R. Schmid, “Manufacturing Engineering and Technology, fourth edition”, PEARSON
2. O.P. Khanna, “A Textbook of Production Technology”, Dhanpat Rai Publications
3. Dr. P.C. Sharma, “*Production Technology*”, S Chand and Co.
4. M. Lal and O P Khanna, “*Textbook of Foundry Technology*”, S Chand and Co.

**Reference Books:**

1. G. Boothroyd & W.A. Knight, “*Fundamental of Machining and Machine Tools*”, third edition”, CRC.
2. Milton C. Shaw, “*Metal Cutting Principles*”, OXFORD University Press
3. W. A. J. Chapman, “*Workshop Technology- Part I, II and III*”, Edward Arnold
4. S K & A K Hajra Choudhary, “*Workshop Technology, Vol. I, II*”, Media promoters and publishers Pvt. Limited, 2007

5. L E Doyle, “*Manufacturing Processes & materials for Engineers*”, Prentice Hall
6. Cyril Donaldson, “*Tool Design*”, Tata McGraw Hill, 2012

| <p>The objectives of this course are</p> <ol style="list-style-type: none"> <li>1. To impart skill-based knowledge to students about types workshop in engineering.</li> <li>2. To give “hands on” training and practice to students for use of various tools, devices, machines in the workshops.</li> <li>3. To develop ability of students to understand, plan and implement various processes and operations to be performed on the raw material to create object of desired shape and size.</li> <li>4. To impart knowledge on various safety standards practiced while working in different types of workshops.</li> </ol>                                                             |                                                                                                                                                                                                                                                                                                                                                       |      |
| Course Outcomes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                       |      |
| <p>Upon successful completion of this course student will be able to:</p> <ol style="list-style-type: none"> <li>1. Know various department specific tools, machines, devices used in engineering practice for creating objects from raw material.</li> <li>2. Know various department specific operations in basic engineering shops and electrical circuitry and appliances.</li> <li>3. Know various safety precautions to be taken before, during and after the various basic engineering operations.</li> <li>4. Interpret job drawings and/or electrical circuitry, plan and execute processes and operations to produce basic components and/or basic electrical circuits.</li> </ol> |                                                                                                                                                                                                                                                                                                                                                       |      |
| Course Content                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                       |      |
