Table of Contents

SEM – VII	2
Design of Concrete Structures [PC-BTC701]	3
Engineering Economics, Estimation, and Costing [PC-BTC702]	6
Professional Elective – II	9
Advanced Structural Analysis [PE-BTC721]	10
Finite Element Analysis [PE-BTC722]	13
Advanced Design of Steel Structures [PE-BTC723]	16
Pre-stressed Concrete [PE-BTC724]	18
Surface Hydrology [PE-BTC731]	20
Water and Air Quality Modelling [PE-BTC741]	22
Industrial Wastewater Treatment [PE-BTC742]	25
Valuation and Value Engineering [PE-BTC751]	28
Contracts Management [PE-BTC752]	30
Pavement Design & Construction [PE-BTC761]	33
Advanced Foundation Engineering [PE-BTC771]	36
Rock Mechanics [PE-BTC772]	39
Ground Improvement Techniques [PE-BTC773]	41
Open Elective – I	43
Economic Policies of India [OE-BTC711]	44
Entrepreneurship, Innovation and Design Thinking [OE-BTC712]	46
Disaster Management and Preparedness [OE-BTC713]	48
Engineering System and Development [OE-BTC714]	51
Project [PR-BTC701]	53
Design and Drawing of Concrete Structures Lab [PC-BTC751]	54
SEM – VIII	56
Open Elective – II (Online)	57
Human Resources Development and Organizational Behaviour [OE-BTC812]	58
Environmental Impact Assessment [OE-BTC815]	62
Professional Elective – III (Online)	65
Earthquake Engineering [PE-BTC825]	66
Hydraulic Modelling [PE-BTC832]	69
Watershed Development and Management [PE-BTC833]	71
Environmental Law and Policy [PE-BTC841]	73
Infrastructure Planning and Management [PE-BTC853]	75
Geographic Information System Science and Application [PE-BTC861]	77
Internship [IN-BTC801]	80

Design of Concrete Structures [PC-BTC701]

Course Code	Course Name
PC-BTC701	Design of Concrete Structures

Course prerequisites	Design of RCC Elements [PC-BTC604]
-----------------------------	------------------------------------

Course Objectives
The objectives of this course are 1. Understand and apply the principles of Limit State Design for the analysis and design of reinforced concrete structural elements such as staircases, flat slabs, retaining walls, and water-retaining structures. 2. Develop competency in the structural planning and design of buildings, including the design of foundations, staircases, and other structural components in accordance with relevant Indian Standard codes. 3. Acquire knowledge of ductile design philosophy and detailing provisions for reinforced concrete structures to enhance seismic performance as per codal requirements.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Apply the principles of the limit state method to design various reinforced concrete elements such as staircases, flat slabs, retaining walls, and water tanks. 2. Develop complete structural design solutions for residential, commercial, or industrial buildings, including foundations and staircases, in compliance with relevant IS codes. 3. Demonstrate an understanding of ductile detailing requirements for earthquake-resistant structures as per IS 13920. 4. Select and implement appropriate methods—both IS coefficient and approximate for the design of circular and rectangular water tanks, including supporting structures.

Course Content		
Module No.	Details	Hrs.
1	Design of staircases: (limit state method of design) Design of Dog legged, Open well type staircase.	06
2	Design of Flat Slabs: (limit state method of design)	06
3	Complete design of residential, commercial or Industrial building including staircase and foundations. (Limit state method of design)	06
4	Complete design of residential, commercial or Industrial building including staircase and foundations. (Limit state method of design). Overview of ductile detailing for Earthquake resistant structures	06
5	Design of retaining walls: (limit state method of design) Design of Cantilever, Counter fort type retaining wall.	06
6	Design of water tanks: Circular and rectangular, at ground level, underground and overhead water tanks	06
7	Design of water tanks: Circular and rectangular, at ground level, underground and overhead water tanks both by IS coefficient and approximate methods, including supporting structure for overhead water tanks Self-Learning: Design of underground water tank	06

Engineering Economics, Estimation, and Costing [PC-BTC702]

Course Code	Course Name
PC-BTC702	Engineering Economics, Estimation, and Costing

Course prerequisites	Building Materials and Construction [PC-BTC201], Building Design with CAD [PC-BTC355], Construction Engineering and Management [PC-BTC601]
-----------------------------	--

Course Objectives

The objectives of this course are

1. To introduce the fundamental principles of economics, accounting, and financial decision-making in the context of construction projects.
2. To develop the ability to prepare specifications, estimates, and quantity take-offs using standard methods, IS codes, and digital tools.
3. To familiarise students with rate analysis, material and market surveys, and productivity norms relevant to construction materials and equipment.
4. To impart knowledge of the tendering process, contract types, and legal frameworks applicable to construction, including relevant acts and dispute resolution mechanisms.

Course Outcomes

Upon successful completion of the course, students should be able to

1. Explain fundamental concepts of economics, accounting, and financial management relevant to construction, and apply them in economic decision-making using tools such as cash flow diagrams, break even and sensitivity analysis.
2. Prepare detailed specifications, estimates, and quantity take-offs using standard methods and IS codes, including bar bending schedules and estimation techniques for buildings and roadwork projects.
3. Conduct rate analysis and material surveys, interpret productivity norms, and utilise thumb rules and software tools—including an introduction to BIM—for quantity surveying and estimation tasks
4. Describe and interpret procedures involved in tendering and contract management, including contract types, arbitration, and legal aspects relevant to construction such as labour laws and dispute resolution

Course Content		
Module No.	Details	Hrs.
1	Basic principles and of economics, accounting, finance and economy, basic terminology related to economics and accounting, introduction to micro and economic decision making, cash flow diagrams, time value of money, equipment cost, equipment life, depreciation, sinking fund, economic management of equipment, present value, future worth, decision making based on economics, private vs. public projects. Benefit to cost ratio, breakeven analysis, sensitivity analysis. Self-learning: Demand/Supply – elasticity, insurance requirements for construction projects	12
2	Specifications-Types, requirements and importance, drafting of general and detailed specifications.	04
3	Approximate estimates, Detailed estimates, Measurement of various items, use of relevant IS codes, taking out quantities, long wall-short wall method, centre line method, bar bending schedule, use of computers in quantity surveying, introduction to BIM.	12
4	Estimation of earthwork for roadwork project, mass haul diagram.	04
5	Material survey, thumb rules for computation of material, market survey of basic materials, rate analysis using relevant IS codes, purpose, importance and necessity of the same, factors affecting, task work, daily output from different equipment/ productivity	04
6	Importance of inviting tenders, preparation of tender documents, tendering process, contract types, relative merits, prequalification, general and special conditions, termination of contracts, extra work and changes, penalty and liquidated charges, settlement of disputes.	04
7	Introduction to Acts pertaining to-Minimum wages, Workman's compensation (WC), Arbitration and conciliation act.	02

Advanced Structural Analysis [PE-BTC721]

Course Code	Course Name
PE-BTC721	Advanced Structural Analysis

Course prerequisites	Structural Mechanics [PC-BTC402], Structural Engineering [PC-BTC501]
----------------------	--

Course Objectives
The objectives of this course are 1. To impart clear understanding of concepts & practical knowledge of advanced and conventional methods of analysis required to design various types of civil engineering structures. 2. To apply stiffness matrix method to analyse various real-life structures required to design of safe & economic structures. 3. To understand development of commercial software using stiffness matrix method

Course Outcomes
Upon successful completion of the course, students should be able to 1. Formulate and assemble stiffness matrices for various structural members (truss, frame, grid, space frame) and analyse indeterminate structures using the matrix stiffness method. 2. Apply the flexibility method and its conventional forms (Elastic Centre, Column Analogy) to determine internal forces and displacements in indeterminate structures under various effects such as support settlements and temperature variations. 3. Construct and interpret Influence Line Diagrams (ILDs) for statically indeterminate structures using Muller Breslau's principle and apply these diagrams to evaluate structural response under moving loads. 4. Use approximate methods for analysing building frames under gravity and lateral loads and perform basic plastic analysis of steel structures.

Course Content		
Module	Details	Hrs.

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

No.		
1	Introduction to Stiffness Method in Matrix Form: Basic concepts of stiffness coefficients, member stiffness matrix for member of plane truss, member of rigid jointed plane frame, member of plane grid and member of space frame. Properties of stiffness matrix, co-ordinate transformation matrix, stiffness matrix in local and global co-ordinate axes system, assemblage of structural stiffness matrix and application of boundary conditions.	06
2	Stiffness Matrix Method cont.: Joint loads, Equivalent joint loads, method of solution for displacements and computation of internal forces in members. Application of stiffness method to beams, pin jointed trusses, rigid jointed plane frames and simple plane grid structures.	05
3	Conventional Form of Stiffness Method, Modified Moment Distribution Method: Symmetric structure, Symmetric and anti-symmetric loads, Modification of stiffness and carryover factors for symmetric and anti-symmetric loads both for sway and non-sway cases for frames with different support conditions. Application to frames (without inclined members) with and without side sways.	07
4	Flexibility Method: Review of concepts of flexibility coefficients, Selection of primary structure, concept of structure flexibility matrix, compatibility equations, solution for redundant forces, computation of internal forces, and joint displacements. Application to pin jointed trusses and rigid jointed plane frames for different loading including the effect of settlement of support, temperature changes and elastic supports. Conventional Form of Flexibility Method: Elastic Center Method and its application to rectangular box, rigid jointed portal frames and fixed arches. Column Analogy Method and its application to analysis of non- prismatic beams, simple rectangular frames, determination of stiffness coefficients and carry over factors for non-prismatic beam members. Self-Learning: Application of Elastic Center Method to fixed arches.	11
5	Influence Line Diagrams for Indeterminate Structures: Muller Breslau's Principle for drawing influence line diagrams for statically indeterminate structures. Influence Lines Diagrams for propped cantilevers, fixed beams and continuous beams. Self-Learning: ILD for indeterminate beams.	06
6	Approximate Methods for Analysis of Building Frames: Approximate methods for gravity loads: Substitute frame and equivalent frames. Approximate methods for lateral loads: Portal and cantilever method.	04
7	Plastic Analysis of Steel Structures: Application to single bay single story rectangular frames.	04

Finite Element Analysis [PE-BTC722]

Course Code	Course Name
PE-BTC722	Finite Element Analysis

Course prerequisites	Structural Mechanics [PC-BTC402], Structural Engineering [PC-BTC501]
----------------------	--

Course Objectives
The objectives of this course are 1. To understand mathematical modelling and numerical formulation of engineering problems. 2. To learn about concepts of elements and their properties. 3. To understand finite element methods and its application for solution of structural mechanics problems.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the principles of numerical and approximate methods such as Galerkin's, Rayleigh-Ritz, and weighted residual methods for solving engineering problems. 2. Develop finite element models using one-, two-, and three-dimensional elements, and formulate interpolation and shape functions for different types of elements. 3. Apply the finite element method to analyse structural elements such as springs, trusses, beams, and two-dimensional stress systems using linear and iso-parametric elements. 4. Analyse basic non-linear and dynamic problems using FEM, including geometric and material non-linearity, and perform vibration analysis through mass and damping matrix formulation.

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

1	Introduction: Mathematical Modeling of Engineering Problems, Types of governing equations, Solution methodologies, numerical modeling, approximate method of analysis – method of point collocation, method of collocation by sub region, method of least squares, Galerkin's method, Rayleigh-Ritz method	05
2	Finite Element Method: General Steps in FEM, Direct approach, variational approach, energy approach and weighted residual approach.	06
3	Finite Elements and Interpolation Functions: Interpolation functions, one two and three dimensional elements –linear, quadratic, Cubic and Lagrangian Interpolation function, Iso-parametric elements, Serendipity elements Shape Functions, Sub-Parametric and super parametric elements, Infinite elements	06
4	One Dimensional Finite Elements: Linear spring, Truss element, Space truss, Beam Element. Application to analysis of beams, trusses, plane frames and grids Multilinear springs, compression and tension only springs.	04
5	Two Dimensional Finite Elements: Two dimensional stress analysis, CST element for plane stress and plane strain, triangular elements for axis-symmetric analysis, rectangular elements, iso-parametric formulation.	05
6	Introduction to Non-Linear Analysis: Geometric Non-Linearity-Geometric Stiffness of an Axial Element. Stability of Bar- Spring System. General Formulation of Geometrically Non Linear Problem. Geometric Stiffness of Beam-Column and Triangular Elements. Non-Linear Material Behaviour. Non- Linear Spring- Elasto Plastic Analysis by FEM- Elasto Plastic Analysis of a truss- Two Dimensional Element Formulations- General Formulation of a physically Non-Linear Problem	05
7	Introduction to Dynamic Analysis by FEM: Formulation of Inertial Properties- Lumped Mass vs Consistent Mass Matrices –Condensation and Assembly of Mass Matrices- Formulation of Damping Properties- Free Vibration, Steady – State and Transient Response Analysis for Simple Problems.	05

Advanced Design of Steel Structures [PE-BTC723]

Course Code	Course Name
PE-BTC723	Advanced Design of Steel Structures

Course prerequisites	Design of steel structures [PC-BTC602]
----------------------	--

Course Objectives
The objectives of this course are 1. To develop clear understanding of concepts, and practical knowledge of modern Civil Engineering techniques for design of steel structures. 2. Use of various relevant IS codes for designing steel structures. 3. To encourage students and faculty to interact with industry, alumni and other reputed institutes for purpose of better understanding of industry requirements 4. To deal with social, environmental and economic issues

Course Outcomes
Upon successful completion of the course, students should be able to 1. Design steel members under tension, compression and bending using IS codes. 2. Design and detail welded and bolted connections in structural steel. 3. Analyse and design industrial steel structures and high-rise systems. 4. Analyse and design gantry girders, lattice towers, and chimneys.

Pre-stressed Concrete [PE-BTC724]

Course Code	Course Name
PE-BTC724	Pre-stressed Concrete

Course prerequisites	Mechanics of Materials [PC-BTC302], Structural Mechanics [PC-BTC402], Structural Engineering [PC-BTC501], Design of RCC Elements [PC-BTC604]
-----------------------------	--

Course Objectives
The objectives of this course are 1. To understand prestress force and its effect in structural members, prestressing systems and industrial applications. 2. To understand the materials which can be used for prestressed structure. 3. To understand the concept of deflections due to prestressing force along with other forces 4. To understand the concept of composite structures and concordance of cables. 5. To understand the design concept using prestressing force and familiarize with IS- 1343.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the fundamental principles of prestressed concrete, including materials, methods, systems of prestressing, and the behaviour of prestressed elements under loading. 2. Analyse prestressed concrete sections for flexure and shear using both working stress and limit state methods, including evaluation of losses, kern points, cable profiles, and deflections. 3. Design pre-tensioned and post-tensioned structural elements such as beams, slabs, and bridge girders in accordance with IS 1343–2012 and IRC loading criteria. 4. Evaluate complex behaviours in prestressed structures such as end zone stresses, creep, relaxation, and apply concepts of composite action and continuity in continuous prestressed members.

CO-PO-PSO Mapping

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

No.		
1	Introduction to basic concepts and general principles of pre-stressed concrete, materials used in prestressed concrete and methods and techniques of prestressing, prestressing systems.	02
2	Analysis of prestressed concrete sections for flexure considering loading stages, computational of sectional properties, critical sections under working loads for pretensioned and post tensioned members, load balancing method of analysis of prestressed concrete beams, losses in prestress, application to simply supported beams and slabs, concept of debonding of cables in pre tensioned units.	09
3	Design philosophy of prestressed concrete sections, permissible stresses in concrete and steel, design approaches using working stress method as per IS 1343 – 2012, limit state of collapse – flexure and shear as applied to prestressed concrete beams, kern points, choice and efficiency of sections, cable profile and layouts, cable zone, deflection of prestressed concrete sections.	09
4	End zone stresses in prestresses concrete members, pretension transfer bond, transmission length, end block of post tensioned members.	06
5	Design of simply supported pre-tensioned and post tensioned slabs and beams. Design of bridge girders subjected to IRC loadings.	06
6	Analysis and design of composite prestressed concrete structures, concept and behaviour of long term creep and relaxation of prestressed members.	05
7	Introduction to application of prestressing to continuous beams, linear transformation and concordance of cables, deck continuity.	05

Surface Hydrology [PE-BTC731]

Course Code	Course Name
PE-BTC731	Surface Hydrology

Course prerequisites	Hydraulic Engineering [PC-BTC404], Water Resource and Irrigation Engineering [PC-BTC502]
-----------------------------	--

Course Objectives
The objectives of this course are 1. To discuss scope of hydrology and hydrologic parameters and introduce the basic components of the hydrological cycle and discuss the water balance model. 2. Give an account of the different components evapotranspiration, precipitation, interception, run off, stream flow. 3. To summarize hydrographs along with estimation and design flood control methods. 4. To describe reservoir and channel routing techniques and its applications.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the components of the hydrological cycle and assess water losses such as evaporation, infiltration, and interception using standard methods. 2. Apply techniques for measurement and analysis of precipitation, streamflow, and runoff, including rainfall-runoff relationships and stream gauging. 3. Analyse hydrographs, including unit and synthetic hydrographs, for hydrological modelling and flood prediction. 4. Evaluate flood estimation and routing methods, and apply hydrological forecasting techniques to support flood control and risk assessment.

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

1	Introduction: Hydrological cycle, scope of hydrology, water budget equation, sources of data, Introduction to climate change.	06
2	Precipitation and Water Losses: Measurement, rainfall records, missing data, mass curve analysis, station year method, depth - area - duration relationship, intensity - duration - frequency relationship. Water losses: Evaporation, evapotranspiration, interception, initial loss, infiltration. Determination of water losses.	06
3	Streamflow's and Runoff: Stream gauging techniques, latest methods of measuring depths, current meter-types-calibration, mid-section and mean section methods, rating curves. Runoff: Factors affecting runoff, rainfall-runoff relationship, runoff estimation.	06
4	Hydrograph analysis: Characteristics, base flow separation, unit hydrograph, S-hydrograph, complex hydrograph, synthetic hydrograph, dimensionless unit hydrograph, instantaneous unit hydrograph.	06
5	Floods and Flood routing: Estimation, envelope curves, flood frequency studies, probability and stochastic methods, estimation of design flood, flood plains, flood hazards, flood control methods, limitations, risk-reliability and safety factor. Reservoir routing, channel routing.	06
6	Hydrological forecasting: Introduction, General operation of flood forecasting, forecasting by unit hydrograph method.	06
7	Case studies: applications of basic principles to hydrology and flood control	06

Water and Air Quality Modelling [PE-BTC741]

Course Code	Course Name
PE-BTC741	Water and Air Quality Modelling

Course prerequisites	Water Supply Engineering [PC-BTC406], Wastewater Engineering and Air Pollution [PC-BTC505],
----------------------	---

Course Objectives
The objectives of this course are 1. Develop models based on the mass-balance approach 2. Predict the impact of the of external waste loading on different environmental matrices 3. Predict and generate future conditions under various loading scenarios or management/intervention action alternatives.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Describe the scope, objectives, and approaches of environmental modelling and outline the model-building process for environmental systems. 2. Apply fundamental principles of mass transport and transformation processes to simulate environmental systems using basic reactor models and material balance equations. 3. Develop and analyse water and air quality models using appropriate analytical methods and interpret results for different environmental scenarios. 4. Demonstrate the use of modelling software such as WASP, QUAL2E, MODFLOW, AERMOD, and CMAQ through practical case studies and research applications.

Industrial Wastewater Treatment [PE-BTC742]

Course Code	Course Name
PE-BTC742	Industrial Wastewater Treatment

Course prerequisites	Water Supply Engineering [PC-BTC406], Wastewater Engineering and Air Pollution [PC-BTC505],
-----------------------------	---

Course Objectives
The objectives of this course are 1. Analyse and understand the difference between Industrial and municipal waste and wastewater 2. Predict DO levels using Streeter Phelps modeling 3. Understand advanced treatment techniques for industrial waste effluents 4. Develop treatment schemes for industries such as pulp and paper, textile, tannery, dairy, electroplating, cane sugar and distilleries 5. Emphasize on inplant control and good housekeeping

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the nature and characteristics of industrial liquid waste and assess its environmental impacts on natural water bodies, sewers, and land. 2. Analyse the effect of industrial waste on aquatic ecosystems using models such as the Streeter-Phelps equation and interpret oxygen sag and eutrophication phenomena. 3. Describe and compare various modern and conventional industrial wastewater treatment methods, including MBBR, MBR, RO, and natural wetland systems. 4. Evaluate industrial waste management strategies for selected industries and propose suitable treatment, reuse, and resource recovery options.

Valuation and Value Engineering [PE-BTC751]

Course Code	Course Name
PE-BTC751	Valuation and Value Engineering

Course prerequisites	Construction Engineering and Management [PC-BTC702]
----------------------	---

Course Objectives
The objectives of this course are 1. To describe purpose of valuation and different methods of valuation. 2. To describe concept and importance of Value analysis and management. 3. To summarize life cycle costing for the construction project.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Differentiate between price, cost and value, and explain the purpose, types, and methods of valuation for various properties and assets including land, buildings, and special structures. 2. Apply suitable valuation techniques such as rental basis, land and building method, profit method, and development method for assessing property value. 3. Demonstrate knowledge of value analysis and value engineering principles to identify unnecessary costs and develop efficient alternatives using tools such as FAST diagrams and job plans. 4. Evaluate construction projects using life cycle costing, present worth analysis, and rate of return methods, and prepare standard valuation reports based on industry practices.

Contracts Management [PE-BTC752]

Course Code	Course Name
PE-BTC752	Contracts Management

Course prerequisites	Construction Engineering and Management [PC-BTC601]
----------------------	---

Course Objectives
The objectives of this course are 1. To describe the Overview of Contract Management 2. To understand Performance parameters; Delays, penalties in contract 3. To summarize the students about Contract Administration and Legal Aspects in Contract Management.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the fundamentals and importance of contract management, including types of contracts 2. Identify and interpret key contract clauses, roles and responsibilities of contracting parties, and the procedures related to notices, contract duration, and pricing. 3. Analyse contract performance parameters, delays, claims, and dispute resolution methods in accordance with legal frameworks such as the Indian Contract Act and Arbitration Act. 4. Demonstrate understanding of contract administration practices in various scenarios, including international and consultancy contracts, and assess procedures for risk management, contract closure, and post-implementation review.

Pavement Design & Construction [PE-BTC761]

Course Code	Course Name
PE-BTC761	Pavement Design & Construction

Course prerequisites	Highway Engineering [PC-BTC504]
-----------------------------	---------------------------------

Course Objectives
The objectives of this course are 1. To acquire the knowledge about distribution of stress within the pavement 2. To discuss the methods available for design of pavements and utilize the knowledge for implementation. 3. To summarize the importance of strengthening existing pavements and implementation of knowledge for its application.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the structural components, design factors, and stress analysis methods for flexible and rigid pavements, including empirical and layered theory approaches. 2. Design flexible and rigid pavements using relevant IRC codes, evaluate failure criteria such as fatigue and rutting, and utilise software tools like IITPAVE for analysis. 3. Describe materials, mix design, and construction techniques for various pavement types including conventional, roller-compacted, and cell-filled concrete pavements. 4. Assess pavement condition through distress evaluation and quality control testing, and design appropriate maintenance, overlay, and drainage solutions based on IRC standards.

Advanced Foundation Engineering [PE-BTC771]

Course Code	Course Name
PE-BTC771	Advanced Foundation Engineering

Course prerequisites	Soil Mechanics [PC-BTC503], Foundation Engineering[PC-BTC603]
----------------------	---

Course Objectives
The objectives of this course are 1. Highlight the importance of site exploration and characterization, purpose, scope and methods. 2. Apply the consolidation theory, use appropriate laboratory tests and field curves, introduce concept of quasi-consolidation 3. Predict the stress-strain behaviour of soil and estimate stresses in soil using various theories 4. Analyze and estimate bearing capacity and settlement of shallow foundations and estimate pile capacity by various methods 5. Explain methods and importance of ground improvement

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the significance and importance of geotechnical investigations and insist on proper implementation of the same in construction projects. 2. Plan and handle simple site projects based on the field data provided to them. 3. Apply the basics explained in earlier semester to complex and practical problems in design and construction of foundations. 4. Recommend the use of suitable ground improvement techniques where required.

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

1	Site Exploration and Characterization: Purpose and scope, influence of soil conditions and type of foundation on exploratory programme, project assessment, phasing of site exploration, excavation and boring methods of exploration, types of samplers and their design features, subsurface soundings – static and dynamic methods, planning of subsurface investigations, as per IS 1892, type and sequence of operations, bore logs, core logs and importance of logging, lateral extent and depth of exploration, interpretation of field and laboratory data	06
2	Consolidation: Terzaghi's theory of one-d consolidation – derivation of equation (solution in detail need not be covered), estimation of C_c and C_v from laboratory tests, Estimation of P_c by various methods, field consolidation curves, Quasi- pre-consolidation and secondary consolidation, practical applications.	08
3	Stress and Strain Behaviour of Soils: Triaxial test - drained and undrained behaviour of sands and clays, failure criteria in soils - only Mohr - Coulomb's criteria, ideal, plastic and real soil behaviour, shear strength of sands and clays.	04
4	Estimation of Stresses: Boussinesq's theory, vertical stress due to concentrated load, horizontal and shear stress due to concentrated load, Isobar diagram, vertical stress distribution on horizontal plane, influence diagram, vertical stress distribution on vertical plane, vertical stress due to line load, vertical stress under strip load, maximum shear stress at points under strip loads, vertical stresses under a circular area, vertical stress under a corner of a rectangular area, Newmark's influence charts, Westergaard's theory.	06
5	Bearing Capacity and Settlement Analysis of Shallow Foundations: Modes of failure, failure criteria, – Terzaghi solutions, Vesic's solutions, IS Code recommendations, assumptions in estimates of ultimate loads, effect of shape, embedment of footing, eccentricity in loading, compressibility (including critical rigidity index), water table. Choice of factor of safety, settlement of foundations on sand – Schmertmann method, Plate load test, evaluation of bearing capacity using standard penetration test, Housel Method	08
6	Pile Foundations: Use of load tests, Introduction to IS 2911 for estimation of single pile capacity by static and dynamic methods, Group capacity in sand and clay deposits, Separation of skin friction and end-bearing capacity. Settlement of single and group of piles.	05
7	Ground Improvement: Improvement of deep cohesionless soils and cohesive soils including stone columns / band drains), instrumentation – mainly pore pressure gauges and settlement gauges and their applications.	05

Rock Mechanics [PE-BTC772]

Course Code	Course Name
PE-BTC772	Rock Mechanics

Course prerequisites	Engineering Geology [BS-BTC302], Soil Mechanics [PC-BTC503]
----------------------	---

Course Objectives
The objectives of this course are 1. Introduce the subject of rock mechanics, explain some theoretical and practical aspects 2. Classify rocks and estimate stresses in rock 3. Discuss problems that arise in rock engineering

Course Outcomes
Upon successful completion of the course, students should be able to 1. Identify and quantify various engineering properties of rock. 2. Analyze their behavior under the application of loads 3. Provide solutions to problems arising during construction in or over rock 4. Apply their understanding of rock mechanics to help in the design of several structures such as tunnels, underground structures and foundations resting on rock.

Ground Improvement Techniques [PE-BTC773]

Course Code	Course Name
PE-BTC773	Ground Improvement Techniques

Course prerequisites	Soil Mechanics [PC-BTC503]
-----------------------------	----------------------------

Course Objectives
The objectives of this course are
1. To understand the necessity and importance of ground improvement techniques.
2. To learn the principles behind mechanical stabilization, physical and chemical ground improvement methods, their suitability and limitations

Course Outcomes
Upon successful completion of the course, students should be able to
1. Demonstrate an understanding of mechanical and chemical methods available for improvement of granular and clayey soils
2. Understand the application of slope reinforcement techniques such as use of geosynthetics, and methods of stabilizing rock mass
3. Analyse the suitability of the ground improvement technique applicable to a particular site and effectively use it to engineer an economical solution.
4. Competently devise engineering solutions to modify soils so as to make them suitable for specific construction requirements

Economic Policies of India [OE-BTC711]

Course Code	Course Name
OE-BTC711	Economic Policies of India

Course prerequisites

Course Objectives
The objectives of this course are 1. To make Engineering students aware about the economic policy of India to become a good project manager.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Understand the structure of India's economic planning and key institutions such as RBI, NITI Aayog, and the Ministry of Finance. 2. Identify and explain major economic policies of India (industrial, trade, fiscal, agricultural, monetary) and their relevance to infrastructure development. 3. Evaluate the role of government policies in promoting economic growth, income redistribution, and technological advancement in the construction sector. 4. Analyse how macroeconomic and stabilisation policies (e.g. inflation control, money supply, interest rates) impact civil engineering projects and financial planning.

Entrepreneurship, Innovation and Design Thinking [OE-BTC712]

Course Code	Course Name
OE-BTC712	Entrepreneurship, Innovation and Design Thinking

Course prerequisites

Course Objectives
The objectives of this course are 1. Innovate based on needs. 2. Write and execute a business plan. 3. Pitch for a start-up.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Identify and evaluate basic societal needs and the significance of community involvement, partnerships, and policy frameworks in driving innovation. 2. Interpret innovation and design strategies based on diverse social, economic, and cultural contexts. 3. Apply human-centred design and innovation principles, from need identification to prototyping and deployment of impactful solutions. 4. Develop a business model, formulate a business plan, and create an effective pitch for launching an entrepreneurial venture.

Disaster Management and Preparedness [OE-BTC713]

Course Code	Course Name
OE-BTC713	Disaster Management and Preparedness

Course prerequisites

Course Objectives
The objectives of this course are 1. Introduce students to the fundamental concepts of disasters, hazards, vulnerabilities, and risks. 2. Help students understand the causes and impacts of various natural and human-made disasters. 3. Familiarise students with disaster management cycles, frameworks, and institutional mechanisms. 4. Develop the ability to assess risk and vulnerability using geospatial and analytical tools. 5. Encourage sustainable and responsible decision-making in disaster preparedness, mitigation, and recover

Course Outcomes
Upon successful completion of the course, students should be able to 1. Identify different types of natural and manmade disasters and understand key terms like hazard, vulnerability, and risk. 2. Explain how development activities and environmental changes can increase disaster risks. 3. Apply disaster management principles and recognise the roles of individuals, communities, and governments in disaster response and recovery. 4. Use tools like GIS and risk assessment techniques to evaluate hazards and plan for disaster preparedness.

Engineering System and Development [OE-BTC714]

Course Code	Course Name
OE-BTC714	Engineering System and Development

Course prerequisites

Course Objectives
The objectives of this course are 1. Introduce students to the social role and ethical responsibility of engineers in promoting equity, efficiency, and sustainability. 2. Enable students to understand interdisciplinary approaches to solving societal problems through engineering. 3. Familiarise students with development indicators and socio-economic paradigms. 4. Provide insights into rural and urban systems and the role of engineers in improving infrastructure and services. 5. Equip students to analyse and solve real-life problems through field-based project work.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the role and responsibilities of engineers in society and their impact on equitable and sustainable development. 2. Interpret various development indicators like HDI and apply the values of equity, efficiency, and sustainability to engineering practice. 3. Compare rural and urban systems and evaluate the impact of engineering interventions on these sectors. 4. Apply interdisciplinary knowledge to analyse and develop solutions for real-world problems through case study/project work.

Project [PR-BTC701]

Course Code	Course Name
PR-BTC701	Project

Course prerequisites	Course prerequisites: Recommended – all courses till semester VI
----------------------	--

Course Objectives
The objectives of this course are 1. Apply knowledge of engineering principles to address real-world societal challenges. 2. Conduct ethical and thorough literature surveys for identifying and addressing engineering problems. 3. Develop empathy-driven problem formulation, analysis, and effective project execution

Course Outcomes
Upon successful completion of the course, students should be able to 1. Use knowledge from previous courses to review literature and find solutions to engineering problems. 2. Apply their understanding to design, formulate, or fabricate a project as part of a team. 3. Analyse resources and choose the most suitable ones for effective project execution. 4. Work ethically in a team and effectively present the project using professional communication skills.

Design and Drawing of Concrete Structures Lab [PC-BTC751]

Course Code	Course Name
PC-BTC751	Design and Drawing of Concrete Structures Lab

Course prerequisites	Design of RCC Elements [PC-BTC604], Design of Concrete Structures [PC-BTC701]
-----------------------------	---

Course Objectives
The objectives of this course are 1. To develop clear understanding of concepts, and practical knowledge of modern Civil Engineering techniques for design of RCC structures and the structural drawings for the same. 2. Use of various relevant IS codes for designing RCC structures.

Course Outcomes
Upon successful completion of the course, students should be able to 1. To design structural members of buildings, water tanks and retaining walls 2. To understand the application of loads and design guidelines for RCC design as per relevant IS codes 3. To prepare detailed drawings ready for construction.

CO-PO-PSO Mapping

Human Resources Development and Organizational Behaviour [OE-BTC812]

Course Code	Course Name
OE-BTC812	Human Resources Development and Organizational Behaviour

Course prerequisites	--
-----------------------------	----

Course Objectives
The objectives of this course are 1. Introduce the fundamentals of Human Resource Development and its role in organisational effectiveness. 2. Equip students with knowledge of HRD interventions such as mentoring, counselling, and competency mapping. 3. Provide an understanding of career development strategies and learning organisations. 4. Highlight the ethical dimensions of HRD and its future role in innovation and talent management. 5. Explore foundational concepts in organisational behaviour and group dynamics, including communication, leadership, and change management.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the Management, HRM, HRD process, challenges, and methods of implementation in organisational settings. 2. Describe HRD interventions like mentoring, counselling, stress management, and competency mapping. 3. Apply concepts of career planning and development to individual and organisational contexts. 4. Analyse individual and group behaviour in organisations, including leadership, motivation, and organisational change.

Environmental Impact Assessment [OE-BTC815]

Course Code	Course Name
OE-BTC815	Environmental Impact Assessment

Course prerequisites	--
-----------------------------	----

Course Objectives
The objectives of this course are 1. Enable graduates to identify attributes for EIA 2. Enable graduates to conduct EIA study 3. Enable graduates to formulate Environmental Management Plans.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Identify environmental attributes for the EIA study 2. Understand methodology and conduct EIA study 3. Specify and Use methods for prediction of the impacts 4. Formulate environmental management plans.

Earthquake Engineering [PE-BTC825]

Course Code	Course Name
PE-BTC825	Earthquake Engineering

Course prerequisites	Integral Calculus and Differential Equations (ICDN) [BS-BTC201], Structural Mechanics [PC-BTC402], Structural Engineering [PC-BTC501]
-----------------------------	---

Course Objectives
The objectives of this course are 8. To develop civil engineering graduates having clear understanding of concept of dynamic loads, dynamic analysis, Seismic analysis of structures. 9. To apply the knowledge of structural dynamic to evaluate the seismic response of structures subjected to different ground motion. To apply response spectrum concept to characterize the ground motion. 10. To apply provisions of IS 1893-2016 & IS 13920-2016 to design seismic resistant structures. 11. To inculcate ethics to deal with social, environmental & economic issues.

Course Outcomes
Upon successful completion of the course, students should be able to 12. Describe earthquake phenomenon, their causes and effects on structures 13. Apply knowledge of structural dynamics in evaluation of structural response to earthquake ground motion 14. Characterize the ground motion in the form of response spectra and construct response spectra and evaluate the structural response to earthquake ground motion using response spectra. 15. Perform Seismic analysis of structure, incorporating the provision of IS -1893-2016; and IS 13920- 2016

Course Content		
Module No.	Details	Hrs.
1	Introduction to structural dynamics, definition of basic problem in dynamics, static v/s dynamic loads, different types of dynamic loads.	02
2	Single degree of Freedom (SDOF) systems: Undamped vibration of SDOF system, natural frequency and period of vibration, damping in structures, viscous damping and Coulomb damping, effect of damping on frequency of vibration and amplitude of vibration, logarithmic decrement. Forced vibration, response to harmonic forces, periodic loading, dynamic load factors, response of structure subjected to general dynamic load, Duhamel's integral, numerical evaluation of dynamic response of SDOF systems subjected to different types of dynamic loads. Use of Fourier Series for periodic forces, introduction to vibration isolation.	08
3	MDOF systems: Direct determination of frequencies and mode shapes, orthogonality principle, approximate methods for determination of frequencies and mode shapes. Forced vibration of MDOF system, modal analysis, applications to beams and multistoried frames with rigid girders subject to lateral dynamic loads including ground motion.	06
4	Seismological background: Seismicity of a region, earthquake faults and waves, structure of earth, plate tectonics, elastic-rebound theory of earthquake, intensity and magnitude of earthquake, measurement of ground motion, seismogram, earthquake frequency, local site effects, seismotectonic and Seismicity of India. Effect of near-field and far-field earthquake ground motions.	04
5	Characterization of ground motion: Earthquake response spectra, factors influencing response spectra, design response spectra for elastic systems, peak ground acceleration, response spectrum shapes, deformation, pseudo-velocity, pseudo-acceleration response spectra, peak structural response from the response spectrum, response spectrum characteristics, construction site specific response spectra.	05
6	Deterministic earthquake response: Types of earthquake excitation, lumped SDOF elastic systems. translational excitation, lumped MDOF elastic	04

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

	systems, translational excitation, time history analysis, multistoried buildings with symmetric plans, multi storied buildings with unsymmetric plans, torsional response of symmetric plan building, distributed - parameter elastic systems, translational excitation, combining maximum modal responses using mean square response of a single mode, SRSS and CQC combination of modal responses.	
7	I. S. code method of seismic analysis: Equivalent static method and its limitation, response spectrum method, IS 1893-2016 provisions for seismic analysis of buildings and water towers, seismic evaluation and retrofitting, types of structural systems used in building to resist earthquake loads. Review of damages during past earthquakes and remedial measures, seismic design considerations, allowable ductility demand, ductility capacity, reinforcement detailing for members and joints as per IS 13920-2016.	09

Hydraulic Modelling [PE-BTC832]

Course Code	Course Name
PE-BTC832	Hydraulic Modelling

Course prerequisites	Hydraulic Engineering [PC-BTC404], Water Resource and Irrigation Engineering [PC-BTC502]
-----------------------------	--

Course Objectives
The main objective of this course is to introduce various concepts which will help in designing hydraulic models.

Course Outcomes
Upon successful completion of the course, students should be able to
1. Explain the principles of dimensional analysis and similarity mechanics relevant to hydraulic modelling.
2. Classify and distinguish between physical, numerical, and data-driven hydraulic models for different engineering applications.
3. Design and analyse gravity-dominated, gravity-friction, and friction-dominated hydraulic models using appropriate model laws and scaling principles.
4. Demonstrate the use of open-source hydraulic modelling software and interpret real-world case studies to evaluate the effectiveness of hydraulic model applications.

Watershed Development and Management [PE-BTC833]

Course Code	Course Name
PE-BTC833	Watershed Development and Management

Course prerequisites	Hydrology and Water Resource Engineering [PC-BTC502]
-----------------------------	--

Course Objectives
The objectives of this course are 1. To explain the concept of watershed and its management. 2. To study watershed hydrology and its behaviour. 3. To describe erosion process. 4. To summarize the engineering measures for soil and water conservation

Course Outcomes
Upon successful completion of the course, students will be able to: CO1: Explain the concepts, characteristics, and significance of watersheds and watershed management practices. CO2: Analyse watershed hydrological processes, including rainfall–runoff relationships, infiltration, and watershed behaviour. CO3: Evaluate soil erosion processes and estimate erosion losses using appropriate methods. CO4: Design and recommend suitable engineering and management measures for soil and water conservation and prepare watershed management plans.

CO-PO-PSO Mapping

CO3	3	3	1	2	2	1	3	–	–	–	–	2	3
CO4	3	3	3	2	2	3	3	–	1	1	1	3	3

Course Content		
Module No.	Details	Hrs.
1	Components of watershed and need of watershed management; Principal factors influencing watershed operations; Delineation of watersheds; Engineering surveys; Data requirement	04
2	Watershed hydrology, water resources assessment in watershed, hydrological cycle; Surface water assessment- rainfall-runoff analysis; Groundwater assessment, infiltration and its measurement	04

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

3	Watershed Behavior- Physical elements of watershed, effects of land use changes on hydrological cycle components, watershed experiments, Land capability classification; Erosion process- factors affecting erosion, types of erosion, soil erosion models	06
4	Engineering measures for soil and water conservation- Contour bunding, graded bunding, bench terracing, land leveling and grading; Small storage structures- Types and design data requirement, loose boulder dams, gabions, check dams and their design criteria	06
5	Rainwater harvesting, direct and indirect methods, filter design, planning and design; Layout and execution; Impact assessment, operation and maintenance issues	06
6	Watershed management plan- Methodology of planning a watershed, identification of watershed problems, socio-economic issues.	06
7	Case studies: Application of Remote sensing and GIS in watershed management	04

Environmental Law and Policy [PE-BTC841]

Course Code	Course Name
PE-BTC841	Environmental Law and Policy

Course prerequisites	Water Supply Engineering [PC-BTC406], Wastewater Engineering and Air Pollution [PC-BTC505]
----------------------	--

Course Objectives
The objectives of this course are 1. Learn about the significance of developments in international environmental law and the fundamental principles that have emerged. 2. Expose about the human right to environment and constitutional framework governing environment in select countries, including India 3. Understand judicial response to environmental issues in India

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the fundamental principles, sources and evolution of environmental law, including constitutional and international environmental frameworks. 2. Interpret statutory and regulatory provisions related to environmental protection, pollution control, natural resource conservation and environmental governance. 3. Analyse legal and policy frameworks addressing contemporary environmental issues such as climate change, biodiversity conservation, waste management, industrial disasters and environmental rights. 4. Evaluate the role of public participation, NGOs, judicial remedies, liability principles and judicial interventions in environmental protection and sustainable development.

Infrastructure Planning and Management [PE-BTC853]

Course Code	Course Name
PE-BTC853	Infrastructure Planning and Management

Course prerequisites	Construction Engineering and Management [PC-BTC702]
----------------------	---

Course Objectives
The objectives of this course are - To describe the role of Infrastructure in the development of nation. - To understand basics of infrastructure planning and management. - To summarize the students about emerging trends in infrastructure

Course Outcomes
Upon successful completion of the course, students should be able to - Understand the role and classification of infrastructure, and assess the demand–supply scenario with reference to Indian conditions. - Apply appropriate techniques and models to forecast and quantify infrastructure requirements using socio-economic, land use, and econometric indicators. - Evaluate infrastructure planning strategies and prioritise development regions through integration at local, regional, and national levels. - Analyse infrastructure management systems and assess current practices, including Public-Private Partnership (PPP), stakeholder concerns, and risk management.

Geographic Information System Science and Application [PE-BTC861]

Course Code	Course Name
PE-BTC861	Geographic Information System Science and Application

Course prerequisites	Basics of Surveying [PC-BTC302], Surveying and Geomatics [PC-BTC403]
----------------------	--

Course Objectives
The objectives of this course are 1. To understand basic GIS theory and principles 2. To be familiar with GIS components 3. To study various methods of spatial data collection and data management 4. To study various database management systems, non-spatial and spatial analysis 5. To use GIS software for basic GIS project

Course Outcomes
Upon successful completion of the course, students should be able to 1. Explain the fundamentals of GIS, including its history, components, coordinate systems, and integration with geodesy, GNSS, and remote sensing. 2. Interpret and apply concepts of maps, map scales, projections, and georeferencing in spatial data input and editing. 3. Construct and manage spatial databases, perform spatial analysis, and apply interpolation techniques using both raster and vector data models. 4. Design map layouts and cartographic visualisations using appropriate GIS tools, and develop a GIS-based project applying end-to-end workflows from data acquisition to spatial analysis and presentation.

Bharatiya Vidya Bhavan's
Sardar Patel College of Engineering
Academic Year 2026-27

1	Introduction to GIS: History of GIS, Early developments in GIS, Applications of GIS, Introduction to Geodesy & GNSS, remote sensing techniques and their nexus with GIS	04
2	Maps and map Scales: Introduction to Maps and map elements and their significance, History of Maps, Map Scales, Types of Maps – uses and presentation, Map and Globe Georeferencing and Projections; Understanding Earth, Coordinate System, Map Projection, Transformation, Georeferencing Spatial Data Input and Editing; Primary Data, Secondary Data, Data Editing	09
3	Spatial Database Management Systems: Introduction, Data Storage, Database Structure Models, Database Management system, Entity Relationship Model, Normalization Data Models and Data Structures; Introduction to Data Models and Data Structures, GIS Data Model, Vector Data Structure, Raster Data structure, Geodatabase and metadata Spatial Analysis; Introduction to spatial analysis, Vector Operations and Analysis, Network Analysis, Raster Data Spatial Analysis Interpolation; Introduction to Interpolation, Global Methods of Interpolation, Local Methods of Interpolation	06
4	Cartographic Principles and Design: Introduction, Map layout, Data presentation, Toposheet Indexing, Distribution Maps Web GIS; Introduction to Web GIS, OGC Standards and services, Mobile GIS	09
5	Application of GIS using case study project: Project is intended to provide a deeper understanding of a GIS application through experience. Students will work individually or in groups of 2 on projects. The project should investigate a particular research problem using ArcGIS or QGIS. The project must be an original piece of work developed for this course, marked by a set of milestones from data collection, data management, data preprocessing, spatial analysis and modelling, and result presentation.	14

Internship [IN-BTC801]

Course Code	Course Name
PE-BTC801	Internship

Course prerequisites

Course Objectives
The objectives of this course are 1. Provide students with hands-on experience in an industrial or professional environment. 2. Bridge the gap between academic knowledge and real-world engineering practice. 3. Enable students to observe and participate in professional work culture, ethics, safety, and communication. 4. Promote understanding of roles, responsibilities, and interdisciplinary collaboration in engineering projects.

Course Outcomes
Upon successful completion of the course, students should be able to 1. Apply classroom knowledge to solve basic engineering problems in a real work setting. 2. Understand the structure and functioning of engineering organisations and follow professional ethics. 3. Prepare technical reports and effectively present the work completed during the internship. 4. Work collaboratively in teams and manage tasks, time, with ethics and responsibilities efficiently.

and environmental sustainability practices. Students may also gain hands-on experience with modern engineering tools and software such as AutoCAD, Civil 3D, STAAD Pro, ETABS, Primavera, MS Project, GIS, and Building Information Modelling (BIM). The internship enables students to understand organizational structures, project execution methodologies, contractual and professional practices, multidisciplinary teamwork, and ethical responsibilities in engineering. Students are required to maintain a work diary, prepare a comprehensive internship report, and present their learning outcomes, highlighting the technical knowledge acquired, practical challenges encountered, solutions adopted, and the professional skills developed during the training period.
